B.Sc. PHYSICS

# RKDF UNIVERSITY RANCHI

## SYLLABUS

### Bachelor of Science (Physics Hons.)

### NEP 2020

**RKDF UNIVERSITY RANCHI**  
**B.Sc. PHYSICS**  
**SEMESTER - I**

| Subject Code | Paper Name                             | Credit |
|--------------|--|--------|
| MJ01PHY      | BASIC MATHEMATICAL PHYSICS & MECHANICS | 3      |

**Course Learning Outcomes:**

On successful completion of this course the student should know:

- Revise the knowledge of calculus. These basic mathematical structures are essential in solving problems in various branches of Physics as well as in engineering.
- Learn the curvilinear coordinates which have applications in problems with spherical and cylindrical symmetries.
- In the laboratory course, learn the fundamentals of the C and C++ programming languages and their applications in solving simple physical problems involving differentiations, integrations, differential equations as well as finding the roots of equations.
- Understand laws of motion and their application to various dynamical situations, notion of inertial frames and concept of Galilean invariance. He / she will learn the concept of conservation of energy, momentum, angular momentum and apply them to basic problems.
- Understand the principles of elasticity through the study of Young Modulus and modulus of rigidity.
- Understand simple principles of fluid flow and the equations governing fluid dynamics.
- Apply Kepler's law to describe the motion of planets and satellite in circular orbit, through the study of law of Gravitation.
- Explain the phenomena of simple harmonic motion and the properties of systems executing such motions.
- Describe how fictitious forces arise in a non-inertial frame, e.g., why a person sitting in a merry-go-round experiences an outward pull.
- Describe special relativistic effects and their effects on the mass and energy of a moving object.
- appreciate the nuances of Special Theory of Relativity (STR)
- In the laboratory course, the student shall perform experiments related to mechanics (compound pendulum), rotational dynamics (Flywheel), elastic properties (Young Modulus and Modulus of Rigidity) and fluid dynamics (verification of Stokes law, Searle method) etc.

**RKDF UNIVERSITY RANCHI**  
**B.Sc. PHYSICS**

**Skills to be learned:**

1. Training in calculus will prepare the student to solve various mathematical problems.
2. He / she shall develop an understanding of how to formulate a physics problem and solve given mathematical equation risen out of it.
3. Learn the concepts of elastic in constant of solids and viscosity of fluids.
4. Develop skills to understand and solve the equations central force problem.
5. Acquire basic knowledge of oscillation.
6. About inertial and non-inertial systems and special theory of relativity

**Course Content:**

The emphasis of course is on applications in solving problems of interest to physicists. The students are to be examined entirely on the basis of problems, seen and unseen.

**Calculus:**

Recapitulation: Limits, continuity, average and instantaneous quantities, differentiation. Plotting functions, Intuitive ideas of continuous, differentiable, etc. functions and plotting of curves.

Approximation: Taylor and binomial series.

First Order and Second Order Differential equations: First Order Differential Equations and Integrating Factor. Homogeneous Equations with constant coefficients. Wronskian and general solution. Particular Integral.

**Vector Calculus:**

Vector Differentiation: Directional derivatives and normal derivative. Gradient of a scalar field and its geometrical interpretation. Divergence and curl of a vector field. Del and Laplacian operators. Vector identities.

Vector Integration: Line, surface and volume integrals of Vector fields. Flux of a vector field. Gauss' divergence theorem, Green's and Stokes Theorems and their applications (no rigorous **proofs**).

**Orthogonal Curvilinear Coordinates:**

Orthogonal Curvilinear Coordinates. Derivation of Gradient, Divergence, Curl and Laplacian in Cartesian, Spherical and Cylindrical Coordinate Systems.

**Elasticity:** Elastic constants and interrelation between Elastic constants. Twisting torque on a Cylinder or Wire and Twisting couple.

**RKDF UNIVERSITY RANCHI**  
**B.Sc. PHYSICS**

**Flexure of Beam:** Bending of beam, Cantilever.

**Surface Tension:** Ripples and Gravity waves, Determination of surface tension by Jaeger's and Quinke's methods. Temperature dependence of surface tension.

Fluid Motion: Kinematics of Moving Fluids: Poiseuille's Equation for Flow of a Liquid through a Capillary Tube and corrections.

**Central Force Motion:** Motion of a particle under a central force field. Two-body problem and its reduction to one-body problem and its solution. Kepler's Laws. Satellite in circular orbit and applications. Geosynchronous orbits. Weightlessness. Basic idea of global positioning system (GPS).

**Oscillations:** Simple Harmonic Oscillations. Differential equation of SHM and its solution. Kinetic energy, potential energy, total energy and their time-average values. Damped oscillation. Forced oscillations: Transient and steady states; Resonance, sharpness of resonance; power dissipation and Quality Factor.

**Special Theory of Relativity:** Michelson-Morley Experiment and its outcome. Postulates of Special Theory of Relativity. Lorentz Transformations. Simultaneity and order of events. Lorentz contraction. Time dilation. Relativistic transformation of velocity, frequency and wave number. Relativistic addition of velocities. Variation of mass with velocity. Massless Particles. Mass-energy Equivalence. Relativistic Doppler effect.

| <b>MJL01PHY</b>     | <b>BASIC MATHEMATICAL PHYSICS &amp; MECHANICS<br/>LAB</b> | <b>1</b>      |

1. Measurements of lengths or diameter using vernier calliper, screw gauge and travelling microscope.
2. To study the random error in observation.
3. To study the Motion of spring and calculate
  - a] Spring constant
  - b]  $g$  and
  - c] modulus of rigidity.
4. To determine the Moment of Inertia of a Flywheel
5. To determine  $g$  and velocity for a freely falling body using Digital Timing Technique
6. To determine coefficient of viscosity of water by capillary flow method[Poiseuille's method]
7. To determine the Modulus of Rigidity of a bar method of bending.
8. To determine the elastic constant of a wire by Seale's method.
9. To determine the value of  $g$  using Bar Pendulum.
10. To determine the value of  $g$  using katers Pendulum. Measurements of lengths or diameter using vernier calliper, screw gauge and travelling microscope.
11. To study the random error in observation.
12. To study the Motion of spring and calculate
  - a] Spring constant
  - b]  $g$  and
  - c] modulus of rigidity.
13. To determine the Moment of Inertia of a Flywheel
14. To determine  $g$  and velocity for a freely falling body using Digital Timing Technique
15. To determine coefficient of viscosity of water by capillary flow method[Poiseuille's method]
16. To determine the Modulus of Rigidity of a bar method of bending.
17. To determine the elastic constant of a wire by Seale's method.
18. To determine the value of  $g$  using Bar Pendulum.
19. To determine the value of  $g$  using katers Pendulum

**B.Sc. PHYSICS**  
**SEMESTER - II**

| Subject Code | Paper Name       | Credit |
|--------------|------------------|--------|
| MJ02PHY      | ELECTROMAGNETISM | 3      |

**Course Learning Outcomes:**

After going through the course, the student should be able to

- Explain and differentiate the vector (electric fields, Coulomb's law) and scalar (electric potential, electric potential energy) formalisms of electrostatics.
- Apply Gauss's law of electrostatics to solve a variety of problems.
- Articulate knowledge of electric current, resistance and capacitance in terms of electric field and electric potential.
- Describe the magnetic field produced by magnetic dipoles and electric currents.
- Explain Faraday-Lenz and Maxwell laws to articulate the relationship between electric and magnetic fields.
- Understand the dielectric properties, magnetic properties of materials and the phenomena of electromagnetic induction.
- Describe how magnetism is produced and list examples where its effects are observed.
- Apply Kirchhoff's rules to analyze AC circuits consisting of parallel and/or series combinations of voltage sources and resistors and to describe the graphical relationship of resistance, capacitor and inductor.
- Apply various network theorems such as Superposition, Thevenin, Norton, Reciprocity, Maximum Power Transfer, etc. and their applications in electronics, electrical circuit analysis, and electrical machines.
- In the laboratory course the student will get an opportunity to verify various laws in electricity and magnetism such as Lenz's law, Faraday's law and learn about the construction, working of various measuring instruments.
- Should be able to verify of various circuit laws, network theorems elaborated above, using simple electric circuits.
- Achieve an understanding of the Maxwell's equations, role of displacement current, gauge transformations, scalar and vector potentials, Coulomb and Lorentz gauge, boundary conditions at the interface between different media.
- Apply Maxwell's equations to deduce wave equation, electromagnetic field energy, momentum and angular momentum density.

## RKDF UNIVERSITY RANCHI

### B.Sc. PHYSICS

- Analyse the phenomena of wave propagation in the unbounded, bounded, vacuum, dielectric, guided and unguided media.
- Understand the laws of reflection and refraction and to calculate the reflection and transmission coefficients at plane interface in bounded media.
- Plan and Execute 2-3 group projects for designing new experiments based on the Syllabi.

#### **Skills to be learned:**

- This course will help in understanding basic concepts of electricity and magnetism and their applications.
- Basic course in electrostatics will equip the student with required prerequisites to understand electrodynamic phenomena.
- Comprehend the role of Maxwell's equation in unifying electricity and magnetism.
- Derive expression for
  - Energy density
  - Momentum density
  - Angular momentum density of the electromagnetic field
- Learn the implications of Gauge invariance in EM theory in solving the wave equations and develop the skills to actually solve the wave equation in various media like
  - Vacuum
  - Dielectric medium
  - Conducting medium
- Derive and understand associated with the properties, EM wave passing through the interface between two media like
  - Reflection
  - Refraction
- Transmission

#### **Course Content:**

1. Electric Field and Electric Potential
2. Conservative nature of Electrostatic Field. Electrostatic Potential. Laplace's and Poisson equations. The Uniqueness Theorem. Potential and Electric Field of a dipole. Force and Torque on a dipole. Electrostatic energy of system of charges. Electrostatic energy of a charged sphere. Conductors in an electrostatic Field. Surface charge and force on a conductor. Capacitance of a system of charged conductors. Parallel-plate capacitor.

## RKDF UNIVERSITY RANCHI

### B.Sc. PHYSICS

3. Dielectric Properties of Matter: Electric Field in matter. Polarization, Polarization Charges. Electrical Susceptibility and Dielectric Constant. Capacitor (parallel plate, spherical, cylindrical) filled with dielectric. Displacement vector  $D$ . Relations between  $E$ ,  $P$  and  $D$ . Gauss' Law in dielectrics.
4. Magnetic Field: Magnetic force between current elements and definition of Magnetic Field  $B$ . Biot-Savart's Law and its simple applications: straight wire and circular loop. Current Loop as a Magnetic Dipole and its Dipole Moment (Analogy with Electric Dipole). Ampere's Circuital Law and its application to (1) Solenoid and (2) Toroid. Properties of  $B$ : curl and divergence. Vector Potential. Magnetic Force on (1) point charge (2) current carrying wire (3) between current elements. Torque on a current loop in a uniform Magnetic Field
5. **Magnetic Properties of Matter:** Magnetization vector ( $M$ ). Magnetic Intensity ( $H$ ). Magnetic Susceptibility and permeability. Relation between  $B$ ,  $H$ ,  $M$ . Ferromagnetism. B-H curve and hysteresis.
6. **Electrical Circuits:** AC Circuits: Kirchhoff's laws for AC circuits. Complex Reactance and Impedance. Series LCR Circuit: (1) Resonance, (2) Power Dissipation and (3) Quality Factor, and
7. Band Width. Parallel LCR Circuit.
8. **Ballistic Galvanometer:** Torque on a current Loop. Ballistic Galvanometer: Current and Charge Sensitivity. Electromagnetic damping. Logarithmic damping. CDR.
9. **Maxwell Equations:** Review of Maxwell's equations. Displacement Current. Vector and Scalar Potentials. Gauge Transformations: Lorentz and Coulomb Gauge. Boundary Conditions at Interface between Different Media. Wave Equations. Plane Waves in Dielectric Media. Poynting Vector and Poynting Theorem. Electromagnetic (EM) Energy Density. Physical Concept of Electromagnetic Field Energy Density.
10. **EM Wave Propagation in Unbounded Media:** Plane EM waves through vacuum and isotropic dielectric medium, transverse nature of plane EM waves, refractive index and dielectric constant, wave impedance. Propagation through conducting media, relaxation time, skin depth. Wave propagation through dilute plasma, electrical conductivity of ionized gases, plasma frequency, refractive index, skin depth.
11. **EM Wave in Bounded Media:** Boundary conditions at a plane interface between two media. Reflection & Refraction of plane waves at plane interface between two dielectric media-Laws of Reflection & Refraction. Fresnel's Formulae for perpendicular & parallel polarization cases, Brewster's law. Reflection & Transmission coefficients. Total internal reflection,

**PRACTICALS:**

1. Use a Multimeter for measuring (a) Resistances, (b) AC and DC Voltages, (c) DC Current, **(d) Capacitances, and (e) Checking electrical fuses.**
2. To study the characteristics of a series RC Circuit.
3. To determine an unknown Low Resistance using Potentiometer.
4. To determine an unknown Low Resistance using Carey Foster's Bridge.
5. To compare capacitances using De' Sauty's bridge.
6. To verify the Thevenin and Norton theorems.
7. To verify the Superposition, and Maximum power transfer theorems.
8. To determine self- inductance of a coil by Anderson's bridge.
9. To study response curve of a Series LCR circuit and determine its (a) Resonant frequency, **(b) Impedance at resonance, (c) Quality factor Q, and (d) Band width.**
10. To study the response curve of a parallel LCR circuit and determine its (a) Anti-resonant frequency and (b) Quality factor Q.
11. Measurement of charge and current sensitivity and CDR of Ballistic Galvanometer
12. To verify the law of Malus for plane polarized light.
13. To determine the specific rotation of sugar solution using Polarimeter.

|--------------|------------------|--------|
| MJ03PHY      | WAVES AND OPTICS | 3      |

**Course Learning Outcomes:**

This course will enable the student to

1. Recognize and use a mathematical oscillator equation and wave equation, and derive these equations for certain systems.
2. Apply basic knowledge of principles and theories about the behavior of light and the physical environment to conduct experiments.
3. Understand the principle of superposition of waves, so thus describe the formation of standing waves.
4. Explain several phenomena we can observe in everyday life that can be explained as wave phenomena.
5. Use the principles of wave motion and superposition to explain the Physics of polarisation, interference and diffraction.
6. Understand the working of selected optical instruments like biprism, interferometer, diffraction grating, and holograms.
7. In the laboratory course, student will gain hands-on experience of using various optical instruments and making finer measurements of wavelength of light using Newton Rings experiment, Fresnel Biprism etc. Resolving power of optical equipment can be learnt firsthand.
8. The motion of coupled oscillators, study of Lissajous figures and behaviour of transverse, longitudinal waves can be learnt in this laboratory course.

**Skills to be learned:**

1. He / she shall develop an understanding of various aspects of harmonic oscillations and waves specially.
  - a. Superposition of collinear and perpendicular harmonic oscillations
  - b. Various types of mechanical waves and their superposition.
- This course in basics of optics will enable the student to understand various optical phenomena, principles, workings and applications optical instruments.

**RKDF UNIVERSITY RANCHI**  
**B.Sc. PHYSICS**

**Course Content:**

**Wave Motion:** Plane and Spherical Waves. Longitudinal and Transverse Waves. Plane Progressive (Travelling) Waves. Wave Equation. Particle and Wave Velocities. Differential Equation. Pressure of a Longitudinal Wave. Energy Transport. Intensity of Wave. Water Waves: Ripple and Gravity Waves.

**Velocity of Waves:** Velocity of Transverse Vibrations of Stretched Strings. Velocity of Longitudinal Waves in a Fluid in a Pipe. Newton's Formula for Velocity of Sound. Laplace's Correction.

**Superposition of Collinear and two perpendicular Harmonic oscillations:** Linearity and Superposition Principle. Superposition of two collinear oscillations having (1) equal frequencies and

(2) different frequencies (Beats). **Superposition of N collinear Harmonic Oscillations with (1) equal phase differences and (2) equal frequency differences. Graphical and Analytical Methods.**

**Lissajous Figures with equal and unequal frequency and their uses.**

**Superposition of Two Harmonic Waves:** Standing (Stationary) Waves in a String: Fixed and Free Ends. Analytical Treatment. Phase and Group Velocities. Changes with respect to Position and Time. Energy of Vibrating String. Transfer of Energy. Normal Modes of Stretched Strings. Plucked and Struck Strings. Melde's Experiment. Longitudinal Standing Waves and Normal Modes. Open and Closed Pipes. Superposition of N Harmonic Waves.

**Interference:** Temporal and Spatial Coherence. Division of amplitude and wavefront. Young's double slit experiment. Lloyd's Mirror and Fresnel's Biprism. Phase change on reflection: Stokes' treatment. Interference in Thin Films: parallel and wedge-shaped films. Fringes of equal inclination (Haidinger Fringes); Fringes of equal thickness (Fizeau Fringes). Newton's Rings: Measurement of wavelength and refractive index.

**Interferometer: Michelson Interferometer-(1) Idea of form of fringes (No theory required), (2) Determination of Wavelength, (3) Wavelength Difference, (4) Refractive Index, and (5) Visibility of Fringes. Fabry-Perot interferometer.**

**Fraunhofer diffraction:** Single slit, Double slit. Multiple slits, Diffraction grating. Circular aperture. Resolving Power of telescope and grating.

**Fresnel Diffraction: Fresnel's Assumptions. Fresnel's Half-Period Zones for Plane Wave.**

**Explanation of Rectilinear Propagation of Light. Theory of a Zone Plate: Multiple Foci of a Zone Plate. Fresnel's Integral, Fresnel diffraction pattern of a straight edge, a slit and a wire**

Polarization of Electromagnetic Waves: Description of Linear, Circular and Elliptical Polarization. Propagation of E.M. Waves in Anisotropic Media. Fresnel's Formula. Uniaxial and Biaxial

## RKDF UNIVERSITY RANCHI

### B.Sc. PHYSICS

Crystals. Light Propagation in Uniaxial Crystal. Double Refraction. Polarization by Double Refraction. Nicol Prism. Ordinary & extraordinary refractive indices. Production & detection of Plane, Circularly and Elliptically Polarized Light. Phase Retardation Plates: Quarter-Wave and Half-Wave Plates. Babinet Compensator and its Uses Analysis of Polarized

#### Light

Rotatory Polarization: Optical Rotation. Biot's Laws for Rotatory Polarization. Fresnel's Theory of optical rotation. Calculation of angle of rotation. Experimental verification of Fresnel's theory. Specific rotation. Laurent's half-shade polarimeter.

**PRACTICALS:**

1. Familiarization with: Schuster's focusing; determination of angle of prism.
2. To determine refractive index of the Material of a prism using sodium source.
3. To determine the dispersive power and Cauchy constants of the material of a prism using mercury source.
4. To determine wavelength of sodium light using Fresnel Biprism.
5. To determine wavelength of sodium light using Newton's Rings.
6. To determine wavelength of (1) Na source and (2) spectral lines of Hg source using plane diffraction grating.
7. To determine dispersive power and resolving power of a plane diffraction grating.
8. To verify the law of Malus for plane polarized light.
9. To determine the specific rotation of sugar solution using Polarimeter.

| Subject Code | Paper Name              | Credit |
|--------------|-------------------------|--------|
| MJ04PHY      | MATHEMATICAL PHYSICS II | 3      |

**Course Learning Outcomes:**

- Learn the Fourier analysis of periodic functions and their applications in physical problems such as vibrating strings etc.
  - Learn about the special functions, such as the Hermite polynomial, the Legendre polynomial, the Laguerre polynomial and Bessel functions and their differential equations and their applications in various physical problems such as in quantum mechanics which they will learn in future courses in detail.
  - Learn the beta, gamma and the error functions and their applications in doing integrations.
  - Acquire knowledge of methods to solve partial differential equations with the examples of important partial differential equations in Physics.
  - Apply the Scilab software in curve fittings, in solving system of linear equations, generating and plotting special functions such as Legendre polynomial and Bessel functions, solving first and second order ordinary and partial differential equations.
  - Learn about the Fourier transform, the inverse Fourier transform, their properties and their applications in physical problems. They are also expected to learn the Laplace transform, the inverse Laplace transforms, their properties and their applications in solving physical problems.
1. In the laboratory course, the students should apply their C++/Scilab programming language to solve the following problems:
    - a. Solution first- and second- order ordinary differential equations with appropriate boundary conditions,
    - b. Evaluation of the Fourier coefficients of a given periodic function,
  - Plotting the Legendre polynomials and the Bessel functions of different orders and interpretations of the results, Least square fit of a given data to a graph

**Skills to be learned:**

- Training in mathematical tools like calculus, integration, series solution approach, special function will prepare the student to solve ODE, PDE's which model physical phenomena.
- He / she shall develop an understanding of how to model a given physical phenomenon such as pendulum motion, rocket motion, stretched string, etc., into set of ODE's, PDE's and

**RKDF UNIVERSITY RANCHI**  
**B.Sc. PHYSICS**

solve them.

**Course Content:**

The emphasis of the course is on applications in solving problems of interest to physicists. Students are to be examined on the basis of problems, seen and unseen.

**Fourier Series:** Periodic functions. Orthogonality of sine and cosine functions, Expansion of periodic functions in a series of sine and cosine functions and determination of Fourier coefficients. Complex representation of Fourier series. Expansion of functions with arbitrary period. Expansion of non-periodic functions over an interval. Even and odd functions and their Fourier expansions and its applications.

**Frobenius Method and Special Functions:** Frobenius method and its applications to differential equations. Legendre, Bessel, Hermite and Laguerre Differential Equations. Properties of Legendre Polynomials: Rodrigues Formula, Generating Function, Orthogonality. Simple recurrence relations. Expansion of function in a series of Legendre Polynomials. Bessel Functions of the First Kind: Generating Function, simple recurrence relations. Zeros of Bessel Functions ( $J_0(x)$  and  $J_1(x)$ ) and Orthogonality.

**Some Special Integrals:** Beta and Gamma Functions and Relation between them. Expression of Integrals in terms of Gamma Functions. Error Function (Probability Integral)

**Partial Differential Equations:** Solutions to partial differential equations, using separation of variables: Laplace's Equation in problems of rectangular, cylindrical and spherical symmetry. Wave equation and its solution for vibrational modes of a stretched string.

Laplace Transforms: Laplace Transform (LT) of Elementary functions. Properties of LTs: Change of Scale Theorem, Shifting Theorem. LTs of 1<sup>st</sup> and 2<sup>nd</sup> order Derivatives and Integrals of Functions, Derivatives and Integrals of LTs. LT of Unit Step function, Periodic Functions. Convolution Theorem. Inverse LT. Application of Laplace Transforms to 2<sup>nd</sup> order Differential Equations: Damped Harmonic Oscillator, Simple Electrical Circuits.

| MJL04PHY     | MATHEMATICAL PHYSICS II LAB | 1      |

**PRACTICALS:**

The aim of this Lab is to use the computational methods to solve physical problems. Course will consist of lectures (both theory and practical) in the Lab. Evaluation done not on the programming but on the basis of formulating the problem.

| Topics   | Description with Applications  |
|--|--|
| Introduction to Numerical computation software Scilab                | Introduction to Scilab, Advantages and disadvantages, Scilab environment, Command window, Figure window, Edit window, Variables and arrays, Initialising variables in Scilab, Multidimensional arrays, Subarray, Special values, Displaying output data, data file, Scalar and array operations, Hierarchy of operations, Built in Scilab functions, Introduction to plotting, 2D and 3D plotting (2), Branching Statements and program design, Relational & logical operators, the while loop, for loop, details of loop operations, break & continue statements, nested loops, logical arrays and vectorization (2) User defined functions, Introduction to Scilab functions, Variable passing in Scilab, optional arguments, preserving data between calls to a function, Complex and Character data, string function, Multidimensional arrays (2) an introduction to Scilab file processing, file opening and closing, Binary I/o functions, comparing binary and formatted functions, Numerical methods and developing the skills of writing a program (2). |
| Curve fitting, Least square fit, Goodness of fit, standard deviation | Ohms law to calculate R, Hooke's law to calculate spring Constant  |

**RKDF UNIVERSITY RANCHI**  
**B.Sc. PHYSICS**

|   |   |
|---|---|
| Inverse of a matrix, Eigen vectors, eigen values problems   | System of algebraic equation  |
| Generation of Special functions using User defined functions in Scilab  | Generating and plotting Legendre Polynomials<br>Generating and plotting Bessel function   |
| Solution of ODE<br>First order Differential equation Euler, modified Euler and Runge-Kutta second order methods<br>Second order differential equation Fixed difference method<br>Partial differential equations | First order differential equation <ul style="list-style-type: none"> <li>• Radioactive decay</li> <li>• Current in RC, LC circuits with DC source</li> <li>• Newton's law of cooling</li> <li>• Classical equations of motion</li> </ul> Second order Differential Equation <ul style="list-style-type: none"> <li>• Harmonic oscillator (no friction)</li> <li>• Damped Harmonic oscillator</li> <li>• Forced Harmonic oscillator</li> <li>• Transient and</li> <li>• Steady state solution</li> </ul> |

- Solve the differential equations:  $dy/dx = e^{-x}$  with  $y = 0$  for  $x = 0$

$$\frac{dy}{dx} + e^{-x}y = x^2$$

$$\frac{d^2y}{dt^2} + 2\frac{dy}{dt} = -y$$

$$\frac{d^2y}{dt^2} + e^{-t}\frac{dy}{dt} = -y$$

- Fourier series: Program to sum  $\sum_{n=1}^{\infty}$
- Evaluate the Fourier coefficients of a given periodic function (square wave)
- Frobenius method and Special functions:

$$\int_{-1}^1 P_n(\mu)P_m(\mu) d\mu = \delta_{n,m}$$

Plot  $P_n(x)$ ,  $y(x)$

**Show recursion relation**

- Calculation of error for each data point of observations recorded in experiments done in previous semesters (choose any two).
- Evaluation of trigonometric functions e.g.  $\sin \theta$ , Given Bessel's function at N points find its value at an intermediate point. Complex analysis: Integrate  $1/(x^2+2)$  numerically and check with computer integration.
- Compute the  $n^{\text{th}}$  roots of unity for  $n = 2, 3$ , and 4.

## RKDF UNIVERSITY RANCHI

### B.Sc. PHYSICS

- Find the two square roots of  $-5+12j$ .
- Solve Kirchoff's Current law for any node of an arbitrary circuit using Laplace's transform.
- Solve Kirchoff's Voltage law for any loop of an arbitrary circuit using Laplace's transform.
- Perform circuit analysis of a general LCR circuit using Laplace's transform.

**RKDF UNIVERSITY RANCHI**  
**B.Sc. PHYSICS**

| Subject Code | Paper Name                      | Credit |
|--------------|---------------------------------|--------|
| MJ05PHY      | THERMAL AND STATISTICAL PHYSICS | 3      |

**Course Learning Outcomes:**

- Comprehend the basic concepts of thermodynamics, the first and the second law of thermodynamics, the concept of entropy and the associated theorems, the thermodynamic potentials and their physical interpretations.
- Learn about Maxwell's thermodynamic relations.
- Learn the basic aspects of kinetic theory of gases, Maxwell-Boltzmann distribution law, equipartition of energies, mean free path of molecular collisions, viscosity, thermal conductivity, diffusion and Brownian motion.
- Learn about the real gas equations, Van der Waals equation of state, the Joule-Thompson effect.
- Understand the concepts of microstate, macrostate, ensemble, phase space, thermodynamic probability and partition function.
- Understand the combinatoric studies of particles with their distinguishable and indistinguishable nature and conditions which lead to the three different distribution laws e.g. Maxwell-Boltzmann distribution, Bose-Einstein distribution and Fermi-Dirac distribution laws of particles and their derivation.
- Learn to apply the classical statistical mechanics to derive the law of equipartition of energy and specific heat.
- Understand the Gibbs paradox, equipartition of energy and concept of negative temperature in two level system.
- Learn to derive classical radiation laws of black body radiation. Wien's law, Rayleigh-Jeans law, ultraviolet catastrophe. Saha ionization formula.
- Learn to calculate the macroscopic properties of degenerate photon gas using BE distribution law, understand Bose-Einstein condensation law and liquid Helium. Bose derivation of Planck's law
- Understand the concept of Fermi energy and Fermi level, calculate the macroscopic properties of completely and strongly degenerate Fermi gas, electronic contribution to specific heat of metals.
- Understand the application of F-D statistical distribution law to derive thermodynamic functions of a degenerate Fermi gas, electron gas in metals and their properties.

**RKDF UNIVERSITY RANCHI**  
**B.Sc. PHYSICS**

- Calculate electron degeneracy pressure and ability to understand the Chandrasekhar mass limit, stability of white dwarfs against gravitational collapse.
- Use Computer simulations to study:
  1. Planck's Black Body radiation Law and compare with the Wien's Law and Raleigh -Jean's Law in appropriate temperature region.
  2. Specific Heat of Solids by comparing, Dulong-Petit, Einstein's and Debye's Laws and study their temperature dependence
- Compare the following distributions as a function of temperature for various energies and the parameters of the distribution functions:
  - a. Maxwell-Boltzmann distribution
  - b. Bose-Einstein distribution
  - c. Fermi-Dirac distribution
- Do 3-5 assignments given by the course instructor to apply the methods of Statistical mechanics to simple problems in Solid State Physics and Astrophysics
- Do the regular weekly assignments of at least 2-3 problems given by the course instructor.

**Skills to be learned:**

1. thermodynamical concepts, principles.
2. Learn the basic concepts and definition of physical quantities in classical statistics and classical distribution law.
3. Learn the application of classical statistics to theory of radiation.
4. Comprehend the failure of classical statistics and need for quantum statistics.
5. Learn the application of quantum statistics to derive and understand.
6. Bose Einstein statistics and its applications to radiation. b. Fermi-Dirac statistic and its applications to quantum systems.

**Course Content:**

**THERMAL PHYSICS**

**Introduction to Thermodynamics:** Zeroth Law and First Law of thermodynamics and its differential form. Internal energy. Reversible and Irreversible process with examples. Interconversion of Work and Heat. Carnot's Theorem. Heat Engines. Carnot's Cycle, Carnot engine & efficiency.

**Entropy:** Concept of entropy, Clausius theorem, Clausius inequality, Second Law of Thermodynamics in terms of Entropy. Entropy of a perfect gas. Entropy Changes in Reversible and Irreversible processes with examples. Principle of Increase of Entropy. Entropy of the Universe. Temperature–Entropy diagrams for Carnot's Cycle. Third Law of Thermodynamics. Unattainability of Absolute Zero.

## RKDF UNIVERSITY RANCHI

### B.Sc. PHYSICS

**Thermodynamic Potentials:** Thermodynamic Potentials: Internal Energy, Enthalpy, Helmholtz Free Energy, Gibb's Free Energy. Their Definitions, Properties and Applications. Cooling due to adiabatic demagnetization, First and second order Phase Transitions with examples.

**Maxwell's Thermodynamic Relations:** Derivations and applications of Maxwell's Relations, Maxwell's Relations:(1) Clausius Clapeyron equation, (2) Values of  $C_p-C_v$ , TdS Equations, (4) Joule-Kelvin coefficient for Ideal and Van der Waal Gases,

Kinetic Theory of Gases

**Molecular Collisions:** Mean Free Path. Collision Probability. Estimates of Mean Free Path. Transport Phenomenon in Ideal Gases: (1) Viscosity, (2) Thermal Conductivity and (3) Diffusion. Brownian Motion and its Significance.

**Real Gases:** Behavior of Real Gases: Deviations from the Ideal Gas Equation. The Virial Equation. Critical Constants. Boyle Temperature. Vander Waal' Equation of State for Real Gases. Values of Critical Constants. Law of Corresponding States. P-V diagrams. Free Adiabatic Expansion of a Perfect Gas. Joule-Thomson Porous Plug Experiment. Joule-Thomson Effect for Real and Vander Waal Gases. Temperature of Inversion. Joule-Thomson Cooling.

#### STATISTICAL PHYSICS

**Classical Statistics:** Macrostate & Microstate, Elementary Concept of Ensemble, Phase Space, Entropy and Thermodynamic Probability, Maxwell-Boltzmann Distribution Law, Partition Function, Thermodynamic Functions of an Ideal Gas, Classical Entropy Expression, Gibbs Paradox, Sackur Tetrode equation, Law of Equipartition of Energy (with proof) – Applications to Specific Heat and its Limitations, Thermodynamic Functions of a Two-Energy Levels System, Negative Temperature.

**Quantum Theory of Radiation:** Spectral Distribution of Black Body Radiation. Inadequacy of classical radiation theory. Planck's Quantum Postulates. Planck's Law of Blackbody Radiation: Experimental Verification. Deduction of (1) Wien's Distribution Law, (2) Rayleigh-Jeans Law, (3) Stefan-Boltzmann Law, (4) Wien's Displacement law from Planck's law.

**Bose-Einstein Statistics:** B-E distribution law, Thermodynamic functions of a strongly Degenerate Bose Gas, Bose Einstein condensation, properties of liquid He (qualitative description), Radiation as a photon gas and Thermodynamic functions of photon gas. Bose derivation of Planck's law.

**Fermi-Dirac Statistics:** Fermi-Dirac Distribution Law, Thermodynamic functions of a Completely and strongly Degenerate Fermi Gas, Fermi Energy, Electron gas in a Metal, Specific Heat of Metals, Relativistic Fermi gas, White Dwarf Stars, Chandrasekhar Mass Limit.

**PRACTICALS:**

- a. To determine the Coefficient of Thermal Conductivity of Cu by Searle's Apparatus.
- b. To determine the Coefficient of Thermal Conductivity of a bad conductor by Lee's disc method.
- c. To determine the Temperature Coefficient of Resistance by Platinum Resistance Thermometer (PRT).
- d. To study the variation of Thermo-Emf of a Thermocouple with Difference of Temperature of its Two Junctions.
- e. Use C/C++/Scilab/other numerical simulations for solving the problems based on Statistical Mechanics like
- f. Plot Planck's law for Black Body radiation and compare it with Raleigh-Jeans Law at high temperature and low temperature.
- g. Plot Specific Heat of Solids (a) Dulong-Petit law, (b) Einstein distribution function, (c) Debye distribution function for high temperature and low temperature and compare them for these two cases.
- h. Plot the following functions with energy at different temperatures
- i. Maxwell-Boltzmann distribution
- j. Fermi-Dirac distribution
- k. Bose-Einstein distribution

**SEMESTER - IV**

| Subject Code | Paper Name                     | Credit |
|--------------|--------------------------------|--------|
| MJ06PHY      | ANALOG AND DIGITAL ELECTRONICS | 3      |

**Course Learning Outcomes:**

- As the successful completion of the course the student is expected to be conversant with the following.
- Secure first-hand idea of different components including both active and passive components to gain a insight into circuits using discrete components and also to learn about integrated circuits.
- About analog systems and digital systems and their differences, fundamental logic gates, combinational as well as sequential and number systems.
- Synthesis of Boolean functions, simplification and construction of digital circuits by employing Boolean algebra.
- Sequential systems by choosing Flip-Flop as a building bock- construct multivibrators, counters to provide a basic idea about memory including RAM, ROM and also about memory organization.
- In the laboratory he is expected to construct both combinational circuits and sequential circuits by employing NAND as building blocks and demonstrate Adders, Subtractors, Shift Registers, and multivibrators using 555 ICs. He is also expected to use  $\mu$ P 8085 to demonstrate the same simple programme using assembly language and execute the programme using a  $\mu$ P kit.
- At the end of the course the student is expected to assimilate the following and possesses basic knowledge of the following.
- N- and P- type semiconductors, mobility, drift velocity, fabrication of P-N junctions; forward and reverse biased junctions.
- Application of PN junction for different type of rectifiers and voltage regulators.
- NPN and PNP transistors and basic configurations namely common base, common emitter and common collector, and also about current and voltage gain.
- Biasing and equivalent circuits, coupled amplifiers and feedback in amplifiers and oscillators.
- Operational amplifiers and knowledge about different configurations namely inverting and non- inverting and applications of operational amplifiers in D to A and A to D conversions.

# RKDF UNIVERSITY RANCHI

## B.Sc. PHYSICS

- To characterize various devices namely PN junction diodes, LEDs, Zener diode, solar cells, PNP and NPN transistors. Also construct amplifiers and oscillators using discrete components. Demonstrate inverting and non-inverting amplifiers using op-amps.

### Skills to be learned:

1. Learn the basics of IC and digital circuits, and difference between analog and digital circuits. Various logic GATES and their realization using diodes and transmitters.
2. Learn fundamental of Boolean algebra and their role in constructing digital circuits.
3. Learn about combinatorial and sequential systems by building block circuits to construct multivibrators and counters.
4. Learn basic concepts of semiconductor diodes and their applications to rectifiers.
5. Learn about junction transistor and their applications.
6. Learn about different types of amplifiers including operational amplifier (Op-Amp) and their applications.
7. Learn about sinusoidal oscillators of various types and A/D conversion.

### Course Content:

#### ANALOG ELECTRONICS:

**Two-terminal Devices and their Applications:** Rectifier Diode: Half-wave Rectifiers. Centre-tapped and Bridge Full-wave Rectifiers, Calculation of Ripple Factor and Rectification Efficiency, C-filter, Zener Diode and Voltage Regulation. Principle and structure of LEDs, Photodiode and Solar Cell.

**Bipolar Junction Transistors:** n-p-n and p-n-p Transistors. Characteristics of CB, CE and CC Configurations. Current gains  $\alpha$  and  $\beta$ , Relations between  $\alpha$  and  $\beta$ . Load Line analysis of Transistors. DC Load line and Q-point. Physical mechanism of current flow, Active, Cutoff and Saturation Regions.

**Amplifiers:** Transistor Biasing and Stabilization Circuits. Fixed Bias and Voltage Divider Bias. Transistor as 2-port Network. h-parameter Equivalent Circuit. Analysis of a single-stage CE amplifier using Hybrid Model. Input and Output Impedance. Current, Voltage and Power Gains. Classification of Class A, B & C Amplifiers.

**Coupled Amplifier:** Two stage RC-coupled amplifier and its freq. response.

**Feedback in Amplifiers:** Effects of Positive and Negative Feedback on Input Impedance, Output Impedance, Gain, Stability, Distortion and Noise.

**Sinusoidal Oscillators:** Barkhausen's Criterion for self-sustained oscillations. RC Phase shift oscillator, determination of Frequency. Hartley & Colpitts oscillators.

**Operational Amplifiers and Applications:** Characteristics of an Ideal and Practical Op- Amp. (IC 741) Open-loop and Closed-loop Gain. Frequency Response. CMRR. Slew Rate and concept of Virtual ground. Inverting and non-inverting amplifiers, Adder, Subtractor, Differentiator, Integrator, Log amplifier.

**Conversion:** Resistive network (Weighted and R-2R Ladder). Accuracy and Resolution. A/D Conversion (successive approximation)

#### DIGITAL ELECTRONICS:

## RKDF UNIVERSITY RANCHI

### B.Sc. PHYSICS

**Digital Circuits:** Difference between analog and digital circuit, Binary Numbers. Decimal to Binary and Binary to Decimal Conversion. BCD, Octal and Hexadecimal numbers. AND, OR and NOT Gates, NAND and NOR Gates as Universal Gates. XOR and XNOR Gates.

**Boolean algebra:** de Morgan's Theorems. Boolean Laws. Simplification of Logic Circuit using Boolean Algebra. Fundamental Products. Idea of Minterms and Maxterms. Conversion of a Truth table into Equivalent Logic Circuit by (1) Sum of Products Method and Karnaugh Map.

**Arithmetic Circuits:** Binary Addition. Binary Subtraction using 2's Complement. Half and Full Adders. Half & Full Subtractors, 4-bit binary Adder/Subtractor.

**Sequential Circuits:** SR, D, and JK Flip-Flops. Clocked (Level and Edge Triggered) Flip-Flops. Preset and Clear operations. Race-around conditions in JK Flip-Flop. M/S JK Flip-Flop.

**Integrated Circuits (Qualitative treatment only):** Active & Passive components. Discrete components. Wafer. Chip. Advantages and drawbacks of ICs. Scale of integration: SSI, MSI, LSI and VLSI (basic idea and definitions only). Classification of ICs. Examples of Linear and Digital ICs.

**Timers:** IC 555: Block diagram and applications: Astable multivibrator and Monostable multivibrator.

**Shift registers:** Serial-in-Serial-out, Serial-in-Parallel-out, Parallel-in-Serial-out and Parallel-in-Parallel-out Shift Registers (only up to 4 bits).

**Counters (4 bits):** Ring Counter. Asynchronous counters, Decade Counter. Synchronous Counter.

|--------------|----------------------------|--------|
| MJ07PHY      | ELEMENTS OF MODERN PHYSICS | 3      |

**Course Learning Outcomes:**

- Know main aspects of the inadequacies of classical mechanics and understand historical development of quantum mechanics and ability to discuss and interpret experiments that reveal the dual nature of matter.
- Understand the theory of quantum measurements, wave packets and uncertainty principle.
- Understand the central concepts of quantum mechanics: wave functions, momentum and energy operator, the Schrodinger equation, time dependent and time independent cases, probability density and the normalization techniques, skill development on problem solving e.g. one dimensional rigid box, tunneling through potential barrier, step potential, rectangular barrier.
- Understanding the properties of nuclei like density, size, binding energy, nuclear forces and structure of atomic nucleus, liquid drop model and nuclear shell model and mass formula.
- Ability to calculate the decay rates and lifetime of radioactive decays like alpha, beta, gamma decay. Neutrinos and its properties and role in theory of beta decay.
- Understand fission and fusion well as nuclear processes to produce nuclear energy in nuclear reactor and stellar energy in stars.
- Understand various interactions of electromagnetic radiation with matter. Electron positron pair creation.
- Understand the spontaneous and stimulated emission of radiation, optical pumping and population inversion. Three level and four level lasers. Ruby laser and He-Ne laser in details. Basic lasing.
- In the laboratory course, the students will get opportunity to perform the following experiments
- Measurement of Planck's constant by more than one method.
- Verification of the photoelectric effect and determination of the work Function of a metal.
- Determination of the charge of electron and  $e/m$  of electron.
- Determination of the ionization potential of atoms.
- Determine the wavelength of the emission lines in the spectrum of Hydrogen atom.
- Determine the absorption lines in the rotational spectrum of molecules.
- Determine the wavelength of Laser sources by single and Double slit experiments
- Determine the wavelength and angular spread of He-Ne Laser using plane diffraction grating.

**RKDF UNIVERSITY RANCHI**  
**B.Sc. PHYSICS**

- Verification of the law of the Radioactive decay and determine the mean life time of a Radioactive Source, Study the absorption of the electrons from Beta decay. Study of the electron spectrum in Radioactive Beta decays of nuclei.
- Plan and Execute 2-3 group projects in the field of Atomic, Molecular and Nuclear Physics in collaboration with other institutions, if, possible where advanced facilities are available.

**Skills to be learned:**

1. Comprehend the failure of classical Physics and need for quantum Physics.
2. Grasp the basic foundation of various experiments establishing the quantum Physics by doing the experiments in laboratory and interpreting them.
3. Formulate the basic theoretical problems in one, two and three dimensional Physics and solve them.
4. Learning to apply the basic skills developed in quantum physics to various problems in
  - a. Nuclear Physics
  - b. Atomic Physics(iii)Laser Physics
5. Learn to apply basic quantum physics to Ruby Laser, He-Ne Laser

**Quantum theory of Light:** Planck's concept of light as a collection of photons; Photo-electric effect and Compton scattering. Wave particle duality, de Broglie wavelength and matter waves; Two-Slit experiment with electrons. Wave description of particles by wave packets. Group and Phase velocities and relation between them. Probability. Wave amplitude and wave functions. Davisson-Germer experiment. Discreteness of energy. Frank-Hertz Experiment.

**Quantum Uncertainty-** Heisenberg uncertainty principle (Uncertainty relations involving Canonical pair of variables), gamma ray microscope thought experiment; Derivation from Wave Packets impossibility of a particle following a trajectory; Estimating minimum energy of a confined particle using uncertainty principle; Energy-time uncertainty principle- application to various physical problems.

**Matter waves and wave amplitude:** Schrodinger equation for non-relativistic particles; Physical observables as operators, Position, Momentum and Energy operators; stationary states; Physical interpretation of a wave function, probabilities and normalization; Probability and probability current densities in one dimension.

**One dimensional infinitely rigid box-** energy eigenvalues and eigenfunctions, normalization; Quantum mechanical scattering and tunnelling in one dimension- across a step potential & rectangular potential barrier.

**Atomic nucleus:** General properties of nuclei. Nature of nuclear force, Nuclear radius and its relation with atomic weight. Nucleus as a Liquid drop, Semi-empirical mass formula of Weiszaker and its significance.

**RKDF UNIVERSITY RANCHI**  
**B.Sc. PHYSICS**

**Radioactivity:** Stability of the nucleus; Law of radioactive decay; Mean life and half-life; Alpha decay; Beta decay- energy released, spectrum and Pauli's prediction of neutrino; Gamma ray emission, energy-momentum conservation: electron-positron pair creation by gamma photons in the vicinity of a nucleus.

**Fission and fusion-** Mass deficit and generation of energy; Fission - nature of fragments and emission of neutrons. Nuclear reactor: slow neutrons interacting with Uranium 235; Fusion and thermonuclear reactions driving stellar energy (brief qualitative discussions).

**Lasers:** Einstein's A and B coefficients. Metastable states. Spontaneous and Stimulated emissions. Optical Pumping and Population Inversion. Three-Level and Four-Level Lasers. Ruby Laser and He-Ne Laser.

**PRACTICALS:**

1. Measurement of Planck's constant using black body radiation and photo-detector
2. Photo-electric effect: photo current versus intensity and wavelength of light; maximum energy of photo-electrons versus frequency of light
3. To determine work function of material of filament of directly heated vacuum diode.
4. To determine the Planck's constant using LEDs of at least 4 different colours.
5. To determine the wavelength of H-alpha emission line of Hydrogen atom.
6. To determine the ionization potential of mercury.
7. To determine the absorption lines in the rotational spectrum of Iodine vapour.
8. To determine the value of  $e/m$  by (a) Magnetic focusing or (b) Bar magnet.
9. To determine the wavelength of laser source using diffraction of single slit.
10. To determine the wavelength of laser source using diffraction of double slits.
11. To determine (1) wavelength and (2) angular spread of He-Ne laser using plane diffraction grating

**Course Content:**

The emphasis of the course is on applications in solving problems of interest to physicists. Students are to be examined on the basis of problems, seen and unseen.

- Complex Analysis: Brief Revision of Complex Numbers and their Graphical Representation. Euler's formula, de Moivre's theorem, Roots of Complex Numbers. Functions of  $z$ . Analyticity and Cauchy-Riemann Conditions. Examples of analytic functions. Singular functions: poles, order of singularity. Integration of a function of a complex variable. Cauchy's Inequality. Cauchy's Integral formula. Simply and multiply connected region. Laurent and Taylor's expansion. Residues and Residue Theorem. Application in solving Definite Integrals.
- Integrals Transforms: Fourier Transforms: Fourier Integral theorem. Fourier Transform. Examples. Fourier transform of trigonometric, Gaussian, finite wave train & other functions. Representation of Dirac delta function as a Fourier Integral. Fourier transform of derivatives, Inverse Fourier transform, Properties of Fourier transforms (translation, change of scale, complex conjugation, etc.). Three dimensional Fourier transforms with examples. Application of Fourier Transforms to differential equations: One dimensional Wave and Diffusion/Heat Flow Equations.
- Laplace Transforms: Laplace Transform (LT) of Elementary functions. Properties of LTs: Change of Scale Theorem, Shifting Theorem. LTs of 1st and 2nd order Derivatives and Integrals of Functions, Derivatives and Integrals of LTs. LT of Unit Step function, Periodic Functions. Convolution Theorem. Inverse LT. Application of Laplace Transforms to 2nd order Differential Equations: Damped Harmonic Oscillator, Simple Electrical Circuits.

| <b>MJL08PHY</b>     | <b>MATHEMATICAL PHYSICS -II LAB</b> | <b>1</b>      |

1. Use of multimeter, voltmeter and ammeter
2. To observe current and voltage drop across the DC circuit elements.
3. To track the connections of elements and identify current flow and voltage drop.
4. To observe the working of transformer under no load and full load condition.
5. Use of diode as half wave rectifier, full wave and bridge rectifier.
6. To observe the response of inductor and capacitance with Ac or Dc sources.
7. To understand the importance of interfacing DC or AC sources to relay protection device.
8. To prepare an extension board with more than one input terminal (3 pin socket) and check its working.
9. to measure:
  - (a) Voltage, and
  - (b) Time period of a periodic wave form using CRO.
10. To test a Diode and Transistor using MultiMate.
11. To design a switch (NOT gate) using a transistor.
12. To verify and design AND, OR, NOT AND XOR gates using NAND gates.
13. To convert a Boolean expression into logic circuits and design it using logic gate ICs.
14. To minimize a given logic circuit.
15. Half adder, Full Adder and 4-bit binary Adder.
16. Half Adder and Full Adder Truth table verification using IC.
17. To build Flip –Flop (RS, D-type and JK) circuits using NAND gates.
18. To design a mono stable multivibrator of given specifications using 555Timer.

**B.Sc. PHYSICS**  
**SEMESTER – V**

| Subject Code | Paper Name                         | Credit |
|--------------|------------------------------------|--------|
| MJ09PHY      | QUANTUM MECHANICS AND APPLICATIONS | 3      |

**Course Content:**

**Time dependent Schrodinger equation:** Postulates of Quantum mechanics, Time dependent Schrodinger equation and dynamical evolution of a quantum state; Properties of Wave Function. Interpretation of Wave Function. Probability and probability current densities in three dimensions; Conditions for Physical Acceptability of Wave Functions. Normalization. Linearity and Superposition Principles. Eigenvalues and Eigenfunctions. commutator of position and momentum operators; Expectation values of position and momentum. Wave Function of a Free Particle.

Time independent Schrodinger Equation-Hamiltonian, stationary states and energy eigen values; expansion of an arbitrary wave function as a linear combination of energy eigen functions; General solution of the time dependent Schrodinger equation in terms of linear combinations of stationary states; Application to spread of Gaussian wave-packet for a free particle in one dimension; wave packets, Position-momentum uncertainty principle.

General discussion of bound states in an arbitrary potential- continuity of wave function, boundary condition and emergence of discrete energy levels; application to one-dimensional problem-square well potential; Quantum mechanics of simple harmonic oscillator-energy levels and energy eigen functions using Frobenius method; Hermite polynomials; ground state, zero-point energy & uncertainty principle.

**Quantum theory of hydrogen-like atoms:** Angular momentum operator and commutation relation between them. time independent Schrodinger equation in spherical polar coordinates; separation of variables for second order partial differential equation; angular momentum operator & quantum numbers; Radial wavefunctions from Frobenius method; shapes of the probability densities for ground & first excited states; Orbital angular momentum quantum numbers  $l$  and  $m$ ; s, p, d... shells.

Atoms in Electric & Magnetic Fields: Electron angular momentum. Space quantization. Electron Spin and Spin Angular Momentum. Larmor's Theorem. Spin Magnetic Moment. Stern- Gerlach Experiment. Zeeman Effect: Electron Magnetic Moment and Magnetic Energy, Gyromagnetic Ratio and Bohr Magneton. Normal and Anomalous Zeeman Effect. Paschen Back and Stark Effect (Qualitative Discussion only).

Single and Many electron atoms: Pauli's Exclusion Principle. Symmetric & Antisymmetric Wave Functions. Periodic table. Fine structure. Spin orbit coupling. Spectral Notations for Atomic States.

## RKDF UNIVERSITY RANCHI

### B.Sc. PHYSICS

Total angular momentum. Vector Model. Spin-orbit coupling in atoms-L-S and J-J couplings. Hund's Rule.)

**B.Sc. PHYSICS**

| Subject Code | Paper Name                         | Credit |
|--------------|------------------------------------|--------|
| MJL09PHY     | QUANTUM MECHANICS AND APPLICATIONS | 1      |

Use C/C++/Scilab for solving the following problems based on QuantumMechanics like

1. Solve the s-wave Schrodinger equation for the ground state and the first excited state of the hydrogen atom:

$$\frac{d^2 y}{dr^2} = (r)(r), A(r) =$$

$$\frac{\hbar^2}{2m} [(r) - E] \text{ where } (r) = -\frac{e^2}{r}$$

$$e^2$$

$$r$$

$$r$$

Here, m is the reduced mass of the electron. Obtain the energy eigenvalues and plot the corresponding wavefunctions. Remember that the ground state energy of the hydrogen atom is  $\approx -13.6$  eV. Take  $e = 3.795$  (eVÅ)<sup>1/2</sup>,  $\hbar c = 1973$  (eVÅ) and  $m = 0.511 \times 10^6$  eV/c<sup>2</sup>.

2. Solve the s-wave radial Schrodinger equation for an atom:

$$\frac{d^2 y}{dr^2} = (r)(r), A(r) =$$

$$\frac{\hbar^2}{2m} [(r) - E] \text{ where } m \text{ is the reduced mass of the system (which can be chosen to be the mass of an electron), for the screened coulomb potential } V(r) = -\frac{e^2}{r - a}$$

$$e^2$$

$$r - a$$

Find the energy (in eV) of the ground state of the atom to an accuracy of three significant digits. Also, plot the corresponding wave function. Take  $e = 3.795$  (eVÅ)<sup>1/2</sup>,  $m = 0.511 \times 10^6$  eV/c<sup>2</sup>, and  $a = 3$  Å,  $5$  Å,  $7$  Å. In these units  $\hbar c = 1973$  (eVÅ). The ground state energy is expected to be above  $-12$  eV in all three cases.

3. Solve the s-wave radial Schrodinger equation for a particle of mass m:

$$\frac{d^2 y}{dr^2} = (r)(r), A(r) = \frac{1}{2} k r^2$$

$$\frac{\hbar^2}{2m} [(r) - E]$$

For the anharmonic oscillator potential

$$V(r) = \frac{1}{2} k r^2$$

## RKDF UNIVERSITY RANCHI

### B.Sc. PHYSICS

2+ 1  $b r$  33 for the ground state energy (in MeV) of particle to an accuracy of three significant digits. Also, plot the corresponding wave function. Choose  $m = 940 \text{ MeV}/c^2$ ,  $k = 100 \text{ MeV fm}^{-2}$ ,  $b = 0, 10, 30 \text{ MeV fm}^{-3}$ . In these units,  $\hbar c = 197.3 \text{ MeV fm}$ . The ground state energy is expected to lie between 90 and 110 MeV for all three cases.

4. Solve the s-wave radial Schrodinger equation for the vibrations of hydrogen molecule:

$$\frac{d^2 y}{dr^2} + 2\mu$$

$$\frac{d^2 r}{dr^2} = (r)(r), A(r) = \hbar^2 [V(r) - E]$$

Where  $\mu$  is the reduced mass of the two-atom system. For the Morse potential

$$V(r) = (e^{-2\alpha(r-r_0)} - e^{-\alpha(r-r_0)})^2 D, r' = r - r_0$$

Find the lowest vibrational energy (in MeV) of the molecule to an accuracy of three significant digits. Also plot the corresponding wave function.

Take:  $m = 940 \times 10^6 \text{ eV}/c^2$ ,  $D = 0.755501 \text{ eV}$ ,  $\alpha = 1.44$ ,  $r_0 = 0.131349 \text{ \AA}$

| Subject Code | Paper Name          | Credit |
|--------------|---------------------|--------|
| MJ10PHY      | SOLID STATE PHYSICS | 3      |

**Course Learning Outcomes:**

At the end of the course the student is expected to learn and assimilate the following.

1. A brief idea about crystalline and amorphous substances, about lattice, unit cell, miller indices, reciprocal lattice, concept of Brillouin zones and diffraction of X-rays by crystalline materials.
2. Knowledge of lattice vibrations, phonons and in depth of knowledge of Einstein and Debye theory of specific heat of solids.
3. At knowledge of different types of magnetism from diamagnetism to ferromagnetism and hysteresis loops and energy loss.
4. Secured an understanding about the dielectric and ferroelectric
  - a. properties of materials.

**Understanding above the band theory of solids and must be able to differentiate insulators, conductors and semiconductors.**

Understand the basic idea about superconductors and their classifications.

To carry out experiments based on the theory that they have learned to measure the magnetic susceptibility, dielectric constant, trace hysteresis loop. They will also employ to four probe methods to measure electrical conductivity and the hall set up to determine the hall coefficient of a semiconductor.

**Skills to be learned:**

1. Learn basics of crystal structure and physics of lattice dynamic
2. Learn the physics of different types of material like magnetic materials, dielectric materials, metals and their properties.
3. Understand the physics of insulators, semiconductor and conductors with special emphasis on the elementary band theory of semiconductors.
4. Comprehend the basic theory of superconductors. Type I and II superconductors, their properties and physical concept of BCS theory.

**Course Content:**

**RKDF UNIVERSITY RANCHI**  
**B.Sc. PHYSICS**

Crystal Structure: Solids: Amorphous and Crystalline Materials. Lattice Translation Vectors. Lattice with a Basis – Central and Non-Central Elements. Unit Cell. Miller Indices. Reciprocal

Lattice. Types of Lattices. Brillouin Zones. Diffraction of X-rays by Crystals. Bragg's Law. Atomic and Geometrical Factor.

Elementary Lattice Dynamics: Lattice Vibrations and Phonons: Linear Mono-atomic and Diatomic Chains. Acoustical and Optical Phonons. Qualitative description of the Phonon Spectrum in Solids. Dulong and Petit's Law, Einstein and Debye theories of specific heat of solids.  $T^3$  law  
Magnetic Properties of Matter: Dia-, Para-, Ferri- and Ferromagnetic Materials. Classical Langevin Theory of dia- and Paramagnetic Domains. Quantum Mechanical Treatment of Paramagnetism. Curie's law, Weiss's Theory of Ferromagnetism and Ferromagnetic Domains. Discussion of B-H Curve. Hysteresis and Energy Loss.

Dielectric Properties of Materials: Polarization. Local Electric Field at an Atom. Depolarization Field. Electric Susceptibility. Polarizability. Clausius Mosotti Equation. Classical Theory of Electric Polarizability. Normal and Anomalous Dispersion. Cauchy and Sellmeier relations. Langevin-Debye equation. Complex Dielectric Constant.

Ferroelectric Properties of Materials: Structural phase transition, Classification of crystals, Piezoelectric effect, Pyroelectric effect, Ferroelectric effect, Electrostrictive effect, Curie-Weiss Law, Ferroelectric domains, PE hysteresis loop

Elementary band theory: Periodic potential and Bloch theorem. Kronig Penny model. Band Gap. Conductor, Semiconductor (P and Ntype) and insulator. Conductivity of Semiconductor, mobility, Hall Effect. Measurement of conductivity (04 probe method) & Hall coefficient.

Superconductivity: Experimental Results. Critical Temperature. Critical magnetic field. Meissner effect. Type I and type II Superconductors, Isotope effect. Idea of BCS theory (No derivation)

**Estimate the energy gap of a semiconductor using a PN junction.**

1. Measurement of susceptibility of paramagnetic solution (Quinck's Tube Method)
2. To measure the Magnetic susceptibility of Solids.
3. To determine the Coupling Coefficient of a Piezoelectric crystal.
4. To measure the Dielectric Constant of a dielectric Materials with frequency
5. To determine the complex dielectric constant and plasma frequency of metal using Surface Plasmon resonance (SPR)
6. To determine the refractive index of a dielectric layer using SPR
7. To study the PE Hysteresis loop of a Ferroelectric Crystal.
8. To draw the BH curve of Fe using Solenoid & determine energy loss from Hysteresis.
9. To measure the resistivity of a semiconductor (Ge) with temperature by four-probe method(room temperature to 150 °C) and to determine its band gap.
10. To determine the Hall coefficient of a semiconductor sample.

**Course Learning Outcomes:**

As the successful completion of the course the student is expected to be conversant with the following.

- Secure first-hand idea of different components including both active and passive components to gain insight into circuits using discrete components and also to learn about integrated circuits.
- About analog systems and digital systems and their differences, fundamental logic gates, combinational as well as sequential and number systems.
- Synthesis of Boolean functions, simplification and construction of digital circuits by employing Boolean algebra.
- Sequential systems by choosing Flip-Flop as a building block- construct multivibrators, counters to provide a basic idea about memory including RAM, ROM and also about memory organization.
- In the laboratory he is expected to construct both combinational circuits and sequential circuits by employing NAND as building blocks and demonstrate Adders, Subtractors, Shift Registers, and multivibrators using 555 ICs. He is also expected to use  $\mu\text{P}$  8085 to demonstrate the same simple programme using assembly language and execute the programme using a  $\mu\text{P}$  kit.
- At the end of the course the student is expected to assimilate the following and possesses basic knowledge of the following.
- N- and P- type semiconductors, mobility, drift velocity, fabrication of P-N junctions; forward and reverse biased junctions.
- Application of PN junction for different type of rectifiers and voltage regulators.
- NPN and PNP transistors and basic configurations namely common base, common emitter and common collector, and also about current and voltage gain.
- Biasing and equivalent circuits, coupled amplifiers and feedback in amplifiers and oscillators.
- Operational amplifiers and knowledge about different configurations namely inverting and non-inverting and applications of operational amplifiers in D to A and A to D conversions.
- To characterize various devices namely PN junction diodes, LEDs, Zener diode, solar cells, PNP and NPN transistors. Also construct amplifiers and oscillators using discrete components. Demonstrate inverting and non-inverting amplifiers using op-amps.

**RKDF UNIVERSITY RANCHI**  
**B.Sc. PHYSICS**

**Skills to be learned:**

1. Learn the basics of IC and digital circuits, and difference between analog and digital circuits. Various logic GATES and their realization using diodes and transmitters.
2. Learn fundamental of Boolean algebra and their role in constructing digital circuits.
3. Learn about combinatorial and sequential systems by building block circuits to construct multivibrators and counters.
4. Learn basic concepts of semiconductor diodes and their applications to rectifiers.
5. Learn about junction transistor and their applications.
6. Learn about different types of amplifiers including operational amplifier. (Op-Amp) and their applications.
7. Learn about sinusoidal oscillators of various types and A/D conversion.

**Course Content:**

**ANALOG ELECTRONICS:**

**Two-terminal Devices and their Applications:** Rectifier Diode: Half-wave Rectifiers. Centre-tapped and Bridge Full-wave Rectifiers, Calculation of Ripple Factor and Rectification Efficiency, C-filter, Zener Diode and Voltage Regulation. Principle and structure of LEDs, Photodiode and Solar Cell.

**Bipolar Junction Transistors:** n-p-n and p-n-p Transistors. Characteristics of CB, CE and CC Configurations. Current gains  $\alpha$  and  $\beta$ , Relations between  $\alpha$  and  $\beta$ . Load Line analysis of Transistors. DC Load line and Q-point. Physical mechanism of current flow, Active, Cutoff and Saturation Regions.

**Amplifiers:** Transistor Biasing and Stabilization Circuits. Fixed Bias and Voltage Divider Bias. Transistor as 2-port Network. h-parameter Equivalent Circuit. Analysis of a single-stage CE amplifier using Hybrid Model. Input and Output Impedance. Current, Voltage and Power Gains. Classification of Class A, B & C Amplifiers.

**Coupled Amplifier:** Two stage RC-coupled amplifier and its freq. response.

**Feedback in Amplifiers:** Effects of Positive and Negative Feedback on Input Impedance, Output Impedance, Gain, Stability, Distortion and Noise.

**Sinusoidal Oscillators:** Barkhausen's Criterion for self-sustained oscillations. RC Phase shift oscillator, determination of Frequency. Hartley & Colpitts oscillators.

**Operational Amplifiers and Applications:** Characteristics of an Ideal and Practical Op- Amp. (IC 741) Open-loop and Closed-loop Gain. Frequency Response. CMRR. Slew Rate and concept of Virtual

## RKDF UNIVERSITY RANCHI

### B.Sc. PHYSICS

ground. Inverting and non-inverting amplifiers, Adder, Subtractor, Differentiator, Integrator, Log amplifier.

**Conversion:** Resistive network (Weighted and R-2R Ladder). Accuracy and Resolution. A/D Conversion (successive approximation)

#### DIGITAL ELECTRONICS:

**Digital Circuits:** Difference between analog and digital circuit, Binary Numbers. Decimal to Binary and Binary to Decimal Conversion. BCD, Octal and Hexadecimal numbers. AND, OR and NOT Gates, NAND and NOR Gates as Universal Gates. XOR and XNOR Gates.

**Boolean algebra:** de Morgan's Theorems. Boolean Laws. Simplification of Logic Circuit using Boolean Algebra. Fundamental Products. Idea of Minterms and Maxterms. Conversion of a Truth table into Equivalent Logic Circuit by (1) Sum of Products Method and (2) Karnaugh Map.

**Arithmetic Circuits:** Binary Addition. Binary Subtraction using 2's Complement. Half and Full Adders. Half & Full Subtractors, 4-bit binary Adder/Subtractor.

**Sequential Circuits:** SR, D, and JK Flip-Flops. Clocked (Level and Edge Triggered) Flip-Flops. Preset and Clear operations. Race-around conditions in JK Flip-Flop. M/S JK Flip-Flop.

**Integrated Circuits (Qualitative treatment only):** Active & Passive components. Discrete components. Wafer. Chip. Advantages and drawbacks of ICs. Scale of integration: SSI, MSI, LSI and VLSI (basic idea and definitions only). Classification of ICs. Examples of Linear and Digital ICs.

Timers: IC 555: Block diagram and applications: Astable multivibrator and Monostable multivibrator.

**Shift registers:** Serial-in-Serial-out, Serial-in-Parallel-out, Parallel-in-Serial-out and Parallel-in-Parallel-out Shift Registers (only up to 4 bits).

**Counters (4 bits):** Ring Counter. Asynchronous counters, Decade Counter. Synchronous Counter.

**PRACTICALS:**

1. To study V-I characteristics of PN junction diode, and verification of diode equation.
2. To study the V-I characteristics of a Zener diode and its use as voltage regulator.
3. Study of V-I & power curves of solar cells, and find maximum power point & efficiency.
4. To study the characteristics of a Bipolar Junction Transistor in CE configuration.
5. To design a CE transistor amplifier of a given gain (mid-gain) using voltage divider bias.
6. To design a digital to analog converter (DAC) of given specifications.
7. To study the analog to digital convertor (ADC) IC.
8. To design an inverting amplifier using Op-amp (741,351) for dc voltage of given gain 9. To design inverting amplifier using Op-amp (741,351) and study its frequency response
10. To design non-inverting amplifier using Op-amp (741,351) & study its frequency response
11. To add two dc voltages using Op-amp in inverting and non-inverting mode
12. To investigate the use of an op-amp as an Integrator.
13. To investigate the use of an op-amp as a Differentiator.
14. To measure (a) Voltage, and (b) Time period of a periodic waveform using CRO.
15. To design a NOT gate switch using a transistor.
16. To verify and design AND, OR, NOT and XOR gates using NAND gates.
17. Half Adder, Full Adder and 4-bit binary Adder.
18. Half Subtractor, Full Subtractor, Adder-Subtractor using Full Adder I.C.
19. To design an astable multivibrator of given specifications using 555 Timer.

Unit-1

**Maxwell Equations:**

Review of Maxwell's equations. Displacement Current. Vector and Scalar Potentials. Gauge Transformations: Lorentz and Coulomb Gauge. Boundary Conditions at Interface between Different Media. Wave Equations. Plane Waves in Dielectric Media. Poynting vector and Poynting Theorem. Electromagnetic (EM) Energy Density.

**Unit-2**

EM Wave Propagation in Unbounded Media:

Plane EM waves through vacuum and isotropic dielectric medium, transverse nature of plane EM waves, refractive index and dielectric constant, wave impedance. Propagation through conducting media, relaxation time, skin depth. Wave propagation through dilute plasma, electrical conductivity of ionized gases, plasma frequency, refractive index, skin depth.

**Unit-3**

EM Wave in Bounded Media:

Boundary conditions at a plane interface between two media. Reflection & Refraction of planewaves at plane interface between two dielectric media-Laws of Reflection & Refraction.

Fresnel's Formulae for perpendicular & parallel polarization cases, Brewster's law. Reflection & Transmission coefficients. Total internal reflection, evanescent waves.

**Unit-4**

Polarization of Electromagnetic Waves:

Description of Linear, Circular and Elliptical Polarization. Propagation of E.M. Waves in Anisotropic Media. Double Refraction. Polarization by Double Refraction. Nicol Prism. Ordinary & extraordinary refractive indices. Production & detection of Plane, Circularly and Elliptically Polarized Light. Phase Retardation Plates: Quarter-Wave and Half-Wave Plates. Babinet Compensator and its Uses. Analysis of Polarized Light

**RKDF UNIVERSITY RANCHI**  
**B.Sc. PHYSICS**

**Unit-5**

**Rotatory Polarization:**

Optical Rotation. Biot's Laws for Rotatory Polarization. Fresnel's Theory of optical rotation. Calculation of angle of rotation. Experimental verification of Fresnel's theory. Specific rotation. Laurent's half-shade polarimeter.

**Optical Fibers: -**

Numerical Aperture. Step and Graded Indices (Definitions Only). Single and Multiple Mode Fibers (Concept and Definition Only).

1. To verify the law of Malus for plane polarized light.
2. To determine the specific rotation of sugar solution using Polarimeter.
3. To analyze elliptically polarized Light by using a Babinet's compensator.
4. To determine the refractive Index of  
(a) glass and (b) a liquid by total internal reflection using a Gaussian eyepiece.
5. To study the polarization of light by reflection and determine the polarizing angle for air-glass interface.
6. To verify the Stefan's law of radiation and to determine Stefan's constant.
7. To determine the Boltzmann constant using V-I characteristics of PN junction diode.

### Unit-1

#### **Classical Statistics:**

Macrostate & Microstate, Elementary Concept of Ensemble, Phase Space, Entropy and Thermodynamic Probability, Maxwell-Boltzmann Distribution Law, Partition Function, Thermodynamic Functions of an Ideal Gas, Classical Entropy Expression, Gibbs Paradox, Sackur Tetrode equation, Law of Equipartition of Energy (with proof) – Applications to Specific Heat and its Limitations.

### Unit-2

Classical Theory of Radiation:

- Properties of Thermal Radiation. Blackbody Radiation. Kirchhoff's law. Stefan-Boltzmann law: Thermodynamic proof. Radiation Pressure. Wien's Displacement law. Wien's Distribution Law. Rayleigh-Jean's Law.

### Unit-3

#### **Quantum Theory of Radiation:**

Spectral Distribution of Black Body Radiation. Planck's Quantum Postulates. Planck's Law of Blackbody Radiation: Experimental Verification. Deduction of (1) Wien's Distribution Law, (2) Rayleigh-Jeans Law, (3) Stefan-Boltzmann Law, (4) Wien's Displacement law from Planck's law.

### Unit-4

#### **Bose-Einstein Statistics:**

distribution law, Thermodynamic functions of a Degenerate Bose Gas, Bose Einstein condensation, properties of liquid He (qualitative description), Radiation as a photon gas and Thermodynamic functions of photon gas. Bose derivation of Planck's law.

### Unit-5

Fermi-Dirac Statistics:

Fermi-Dirac Distribution Law, Thermodynamic functions of a Degenerate Fermi Gas, Fermi Energy, Electron gas in a Metal, Specific Heat of Metals, Relativistic Fermi gas, White Dwarf Stars, Chandrasekhar Mass Limit.

1. To find the ionization potential of mercury using a gas-filled diode.
2. To measure the dielectric constant as a function of temperature and to find the curie temperature of the given material.
3. Study of optical properties of plasma.
4. To determine the pressure of hydrogen gas alone, you will need to use Dalton's Law of Partial Pressures.
5. Measurement of the change of magnetic susceptibility of a nickel slug.
6. Study of plasma as the fourth state of matter.

**RKDF UNIVERSITY RANCHI**  
**B.Sc. PHYSICS**

| Subject Code | Paper Name         | Credit |
|--------------|--------------------|--------|
| MJ15PHY      | CLASSICAL DYNAMICS | 3      |

**Course Learning Outcomes:**

1. Revise the knowledge of the Newtonian, the Lagrangian and the Hamiltonian formulations of classical mechanics and their applications in appropriate physical problems.
2. Learn about the small oscillation problems.
3. Recapitulate and learn the special theory of relativity- postulates of the special theory of relativity, Lorentz transformations on space-time and other four vectors, four-vector notations, space-time invariant length, length contraction, time dilation, mass-energy relation, Doppler effect, light cone and its significance, problems involving energy- momentum conservations.
4. Learn the basics of fluid dynamics, streamline and turbulent flow, Reynolds's number, coefficient of viscosity and Poiseuille's equation.
5. Review the retarded potentials, potentials due to a moving charge, Lienard Wiechert potentials, electric and magnetic fields due to a moving charge, power radiated, Larmor's formula and its relativistic generalization.

**Skills to be learned:**

1. Learn to define generalized coordinates, generalized velocities, generalized force and write Lagrangian for mechanical system in terms of generalized coordinates.
2. Learn to derive Euler-Lagrange equation of motion and solve them for simple mechanical systems.
3. Learn to write Hamiltonian for mechanical systems and derive and solve Hamilton's equation of motion for simple mechanical systems.
4. Formulate the problem of small amplitude oscillation and solve them to obtain normal modes of oscillation and their frequencies in simple mechanical systems.
5. Develop the basic concepts of special theory of relativity and its applications to dynamical systems of particles.
6. Develop the methods of relativistic kinematics of one and two particle system and its application to two particle decay and scattering.

**Course Content:**

## RKDF UNIVERSITY RANCHI

### B.Sc. PHYSICS

- Classical Mechanics of Point Particles: Review of Newtonian Mechanics; Application to the motion of a charge particle in external electric and magnetic fields- motion in uniform electric field, magnetic field- gyro-radius and gyro frequency, motion in crossed electric and magnetic fields. Generalized coordinates and velocities, Hamilton's principle, Lagrangian and the Euler- Lagrange equations, one- dimensional examples of the Euler-Lagrange equations- one- dimensional Simple Harmonic Oscillations and falling body in uniform gravity; applications to simple systems such as coupled oscillators Canonical momenta & Hamiltonian. Hamilton's equations of motion. Applications: Hamiltonian for a harmonic oscillator, solution of Hamilton's equation for Simple Harmonic Oscillations; particle in a central force field- conservation of angular momentum and energy.
- Small Amplitude Oscillations: Minima of potential energy and points of stable equilibrium, expansion of the potential energy around a minimum, small amplitude oscillations about the minimum, normal modes of oscillations example of N identical masses connected in a linear fashion to (N -1) - identical springs.
- Special Theory of Relativity: Postulates of Special Theory of Relativity. Lorentz Transformations. Minkowski space. The invariant interval, light cone and world lines. Space- time diagrams. Time - dilation, length contraction and twin paradox. Four-vectors: space-like, time-like and light-like. Four- velocity and acceleration. Metric and alternating tensors. Four- momentum and energy- momentum relation. Doppler effect from a four-vector perspective. Concept of four-force. Conservation of four-momentum. Relativistic kinematics. Application to two-body decay of an unstable particle.
- Fluid Dynamics: Density and pressure P in a fluid, an element of fluid and its velocity, continuity equation and mass conservation, stream-lined motion, laminar flow, Poiseuille's equation for flow of a liquid through a pipe, Navier-Stokes equation, qualitative description of turbulence, Reynolds number.

- A) Study of gear parameters. b) Experimental study of velocity ratios of simple, compound, Epicyclic and differential gear trains.
2. a) Kinematics of Four Bar, Slider Crank, Crank Rocker, Double crank, Double rocker, Oscillating cylinder Mechanisms.
- b) Kinematics of single and double universal joints.
3. a) Determination of Mass moment of inertia of Fly wheel and Axle system.
- b) Determination of Mass Moment of Inertia of axisymmetric bodies using Turn Table apparatus.
- c) Determination of Mass Moment of Inertia using bifilar suspension and compound pendulum.
4. Motorized gyroscope – Study of gyroscopic effect and couple.
5. Governor - Determination of range sensitivity, effort etc., for Watts, Porter, Proell, and Hartnell Governors. 6. Cams – Cam profile drawing, Motion curves and study of jump phenomenon
7. a) Single degree of freedom Spring Mass System – Determination of natural Frequency and verification of Laws of springs – Damping coefficient determination.
- b) Multi degree freedom suspension system – Determination of influence coefficient.
8. a) Determination of torsional natural frequency of single and Double Rotor systems.- Undamped and Damped Natural frequencies.
- b) Vibration Absorber – Tuned vibration absorber.
9. Vibration of Equivalent Spring mass system – undamped and damped vibration.
10. Whirling of shafts – Determination of critical speeds of shafts with concentrated loads

| <b>Subject Code</b> | <b>Paper Name</b>         | <b>Credit</b> |
|---------------------|---------------------------|---------------|
| <b>MJ16PHY</b>      | <b>ELECTRICAL CIRCUIT</b> | <b>3</b>      |

**Unit-I**

Basic Electricity Principles: Voltage, Current, Resistance, and Power. Ohm's law. Series, parallel, and series-parallel combinations. AC Electricity and DC Electricity. Familiarization with multimeter, voltmeter and ammeter.

**Unit-II**

Understanding Electrical Circuits: Main electric circuit elements and their combination. Rules to analyze DC sourced electrical circuits. Current and voltage drop across the DC circuit elements. Single-phase and three-phase alternating current sources. Rules to analyze AC sourced electrical circuits. Real, imaginary and complex power components of AC source. Power factor. Saving energy and money.

**Unit-III**

Generators and Transformers: DC Power sources. AC/DC generators. Inductance, capacitance, and impedance. Operation of transformers.

Electric Motors: Single-phase, three-phase & DC motors. Basic design. Interfacing DC or AC sources to control heaters & motors. Speed & power of ac motor.

Electrical Protection: Relays. Fuses and disconnect switches. Circuit breakers. Overload devices. Ground-fault protection. Grounding and isolating. Phase reversal. Surge protection. Interfacing DC or AC sources to control elements (relay protection device)

1. Electrical Wiring: Different types of conductors and cables. Basics of wiring-Star and delta connection. Voltage drops and losses across cables and conductors. Instruments to measure current, voltage, power in DC and AC circuits. Insulation.

| <b>MJL16PHY</b>     | <b>ELECTRICAL CIRCUIT LAB</b> | <b>1</b>      |

1. Use of multimeter, voltmeter and ammeter
2. To observe current and voltage drop across the DC circuit elements.
3. To track the connections of elements and identify current flow and voltage drop.
4. To observe the working of transformer under no load and full load condition
5. Use of diode as half wave, full wave and bridge rectifier
6. To observe the response of inductor and capacitor with DC or AC sources
7. To understand the importance of interfacing DC or AC sources to relay protection device
8. To prepare an extension board with more than one input terminal (3 pin socket) and check its working
  1. To measure:
    - (a) Voltage, and
    - (b) Time period of a periodic waveform using CRO.
  2. To test a Diode and Transistor using a Multimeter.
  3. To design a switch (NOT gate) using a transistor.
  4. To verify and design AND, OR, NOT and XOR gates using NAND gates.
  5. To design a combinational logic system for a specified Truth Table.
  6. To convert a Boolean expression into logic circuit and design it using logic gate ICs.
  7. To minimize a given logic circuit.
  8. Half Adder, Full Adder and 4-bit binary Adder.

|---------------------|---------------------------|---------------|
| <b>MJ17PHY</b>      | <b>GEOMETRICAL OPTICS</b> | <b>3</b>      |

Fermat's Principle :- Optical Path. Fermat's Principle of Least Time or Extremum Path. Examples of Fermat's Principle:- (1) Reflection and (2) Refraction.

Lenses :- Transverse Magnification of a Spherically Refracting Surface. Lagrange and Helmholtz Laws of Magnification. Cardinal Points of a Coaxial Optical System. Graphical Construction of Image using Cardinal Points. Deviation produced by a Thin Lens. Equivalent Focal Length of Two Thin Lenses separated by a distance. Cardinal Points of a Coaxial System of Two Thin Lenses. Thick Lenses. Focal Length of a Thick Lens. Variation of Focal Length of a Convex Lens with Thickness. Cardinal Points of a Thick Lens.

Wave Optics

Nature of Light :- Theories of Light. Electromagnetic Nature of Light Definition of a Wave Front. Propagation of a Wave Front. Huygens Principle of Secondary Wavelets.

### **Interference**

Interference : Division of Amplitude and Division of Wavefront. Young's Double Slit Experiment. Lloyd's Mirror and Fresnel's Biprism. Phase Change on Reflection : Stoke's treatment.. Interference in Thin Films : Parallel and Wedge-shaped Films. Fringes of Equal Inclination (Haidinger Fringes) and Fringes of Equal Thickness (Fizeau Fringes). Newton's Rings : Measurement of Wavelength and Refractive Index.

Michelson's Interferometer:- (1) Idea of form of fringes (No Theory required), (2) Determination of Wavelength, (3) Wavelength Difference, (4) Refractive Index, (5) Standardization of Meter and (6) Visibility of Fringes.

Coherence :- Temporal and Spatial Coherence. Theory of Partial Coherence. Coherence Time and Coherence Length. Purity of a Spectrum Line.

Diffraction

Fresnel diffraction:- Fresnel's Assumptions. Fresnel's Half-Period Zones for Plane Wave. Explanation of Rectilinear Propagation of Light. Theory of a Zone Plate: Multiple Foci of a Zone Plate. Comparison of a Zone plate with a convex lens. Diffraction due to (1) a Straight Edge and (2) a Rectangular Aperture (Slit), (3) a Small Circular Aperture and (4) an opaque Circular

## RKDF UNIVERSITY RANCHI

### B.Sc. PHYSICS

Disc. Fresnel's Integrals, Cornu's Spiral : Fresnel Diffraction Pattern due to (1) a Straight Edge, (2) a Slit, and (3) a Wire (Qualitatively using Cornu's Spiral).

Fraunhofer diffraction: Diffraction due to (1) a Single Slit, (2) a Double Slit and (3) a Plane Transmission Grating. Rayleigh's criterion of resolution. Resolving Power and Dispersive Power of a Plane Diffraction Grating.

Holography: Principle of Holography. Recording and Reconstruction Method. Theory of Holography as Interference between two Plane Waves.

**Reflection, Refraction and Dispersion**

- To determine the Refractive Index of the Material of a given Prism using Sodium Light.
- To determine the Refractive Index of a Liquid by Total Internal Reflection using Wollaston's Air-film.
- To determine the Refractive Index of (1) Glass and (2) a Liquid by Total Internal Reflection using a Gaussian Eyepiece.
- To determine the Dispersive Power of the Material of a given Prism using Mercury Light.
- To determine the value of Cauchy Constants.
- To determine the Resolving Power of a Prism.

**Interference**

- To determine wavelength of sodium light using Fresnel Biprism.
- To determine wavelength of sodium light using Newton's Rings.
- To determine the Thickness of a Thin Paper by measuring the Width of the Interference Fringes produced by a Wedge-Shaped Film.
- To determination Wavelength of Sodium Light using Michelson's Interferometer.

**Diffraction**

- To determine the Diameter of a Thin Wire by studying the Diffraction Produced by it.
- To determine the wavelength of Laser light using Diffraction of Single Slit.
- To determine the wavelength of (1) Sodium and (2) Mercury Light using Plane Diffraction Grating.
- To determine the Dispersive Power of a Plane Diffraction Grating.
- To determine the Resolving Power of a Plane Diffraction Grating.
- To determine the (1) Wavelength and (2) Angular Spread of He-Ne Laser using Plane Diffraction Grating.
- To study the Polarization of Light by Reflection and to determine the Polarizing Angle for air-glass interface.
- To measure the Intensity using Photosensor and Laser in diffraction patterns of single and double slits.

| <b>Subject Code</b> | <b>Paper Name</b>   | <b>Credit</b> |
|---------------------|---|---------------|
| <b>MJ18PHY</b>      | <b>PHYSICS-DSE: EMBEDDED SYSTEM:<br/>INTRODUCTION TO MICROCONTROLLERS</b> | <b>3</b>      |

- Embedded system introduction: Introduction to embedded systems and general purpose computer systems, architecture of embedded system, classifications, applications and purpose of embedded systems, challenges & design issues in embedded systems, operational and non-operational quality attributes of embedded systems, elemental description of embedded processors and microcontrollers.
- Review of microprocessors: Organization of Microprocessor based system, 8085 $\mu$ p pin diagram and architecture, concept of data bus and address bus, 8085 programming model, instruction classification, subroutines, stacks and its implementation, delay subroutines, hardware and software interrupts.
- 8051 microcontroller: Introduction and block diagram of 8051 microcontroller, architecture of 8051, overview of 8051 family, 8051 assembly language programming, Program Counter and ROM memory map, Data types and directives, Flag bits and Program Status Word (PSW) register, Jump, loop and call instructions
- 8051 I/O port programming: Introduction of I/O port programming, pin out diagram of 8051 microcontroller, I/O port pins description & their functions, I/O port programming in 8051 (using assembly language), I/O programming: Bit manipulation.
- Programming: 8051 addressing modes and accessing memory using various addressing modes, assembly language instructions using each addressing mode, arithmetic and logic instructions, 8051 programming in C: for time delay & I/O operations and manipulation, for arithmetic and logic operations, for ASCII and BCD conversions
- Timer and counter programming: Programming 8051 timers, counter programming.
- Serial port programming with and without interrupt: Introduction to 8051 interrupts, programming timer interrupts, programming external hardware interrupts and serial communication interrupt, interrupt priority in the 8051.

| MJL18PHY     | <b>PRACTICALS- EMBEDDED SYSTEM:<br/>INTRODUCTION TO MICROCONTROLLERS</b> | <b>1</b> |

1. To find that the given numbers is prime or not.
2. To find the factorial of a number.
3. Write a program to make the two numbers equal by increasing the smallest number and decreasing the largest number.
4. Use one of the four ports of 8051 for O/P interfaced to eight LED's. Simulate binary counter (8 bit) on LED's .
5. Program to glow the first four LEDs then next four using TIMER application.
6. Program to rotate the contents of the accumulator first right and then left.
7. Program to run a countdown from 9-0 in the seven segment LED display.
8. To interface seven segment LED display with 8051 microcontroller and display 'HELP' in the seven segment LED display.
9. To toggle '1234' as '1324' in the seven segment LED display.
10. Interface stepper motor with 8051 and write a program to move the motorthrough a given angle in clock wise or counter clockwise direction.

Application of embedded systems: Temperature measurement, some information on LCD display, interfacing a keyboard.

**B.Sc. PHYSICS**

| Subject Code | Paper Name                                 | Credit |
|--------------|--|--------|
| MJ19PHY      | PHYSICS-DSE: ADVANCED MATHEMATICAL PHYSICS | 3      |

**Linear Algebra:** Vector Spaces: Vector Spaces over Fields of Real and Complex numbers. Examples. Vector space of functions. Linear independence of vectors. Basis and dimension of a vector space. Change of basis. Subspace. Isomorphisms. Inner product and Norm. Inner product of functions: the weight function. Triangle and Cauchy Schwartz Inequalities. Orthonormal bases. Sine and cosine functions in a Fourier series as an orthonormal basis. Gram Schmidt orthogonalisation.

**Linear Transformations:** Introduction. Identity and inverse. Singular and non-singular transformations. Representation of linear transformations by matrices. Similarity transformation. Linear operators. Differential operators as linear operators on vector space of functions. Commutator of operators. Orthogonal and unitary operators and their matrix representations. Adjoint of a linear operator. Hermitian operators and their matrix representation. Hermitian differential operators and boundary conditions. Examples. Eigenvalues and eigenvectors of linear operators. Properties of eigenvalues and eigenvectors of Hermitian and unitary operators. Functions of Hermitian operators/matrices.

**Tensors:** Tensors as multilinear transformations (functionals) on vectors. Examples: Moment of Inertia, dielectric susceptibility. Components of a tensor in basis. Symmetric and antisymmetric tensors. The completely antisymmetric tensor. Non-orthonormal and reciprocal bases. Summation convention. Inner product of vectors and the metric tensor. Coordinate systems and coordinate basis vectors. Reciprocal coordinate basis. Components of metric in a coordinate basis and association with infinitesimal distance. Change of basis: relation between coordinate basis vectors. Change of tensor components under change of coordinate system. Example: Inertial coordinates & bases in Minkowski space, Lorentz transformations as coordinate transformations, Electromagnetic tensor and change in its components under Lorentz transformations.

### **Calculus of Variations**

**Variational Principle:** Euler's Equation. Application to Simple Problems (shape of a soap film, Fermat's Principle, etc.). Several Dependent Variables and Euler's Equations. Example: Hamilton's Principle and the Euler-Lagrange equations of motion. Geodesics: geodesic equation as a set of Euler's equations.

**RKDF UNIVERSITY RANCHI**  
**B.Sc. PHYSICS**

**Constrained Variations:** Variations with constraints. Applications: motion of a simple pendulum, particle constrained to move on a hoop.

**Scilab based simulations experiments based on Mathematical Physics problems like**

1. Linear algebra:

- Multiplication of two 3 x 3 matrices.
- Eigenvalue and eigenvectors of

$$\begin{pmatrix} 2 & 1 & \bar{1} \\ 1 & 3 & 2 \\ 3 & 1 & 4 \end{pmatrix}; \begin{pmatrix} 1 & -i & 3+4i \\ +i & 2 & 4 \\ 3-4i & 4 & 3 \end{pmatrix}; \begin{pmatrix} 2 & -i & 2i \\ +i & 4 & 3 \\ -2i & 3 & 5 \end{pmatrix}$$

1. Orthogonal polynomials as eigen functions of Hermitian differential operators.
2. Determination of the principal axes of moment of inertia through diagonalization.
3. Vector space of wave functions in Quantum Mechanics: Position and momentum differential operators and their commutator, wave functions for stationary states as eigen functions of Hermitian differential operator.
4. Lagrangian formulation in Classical Mechanics with constraints.
5. Study of geodesics in Euclidean and other spaces (surface of a sphere, etc).
6. Estimation of ground state energy and wave function of a quantum system.

**SEMESTER VIII**

| Subject Code | Paper Name                   | Credit |
|--------------|------------------------------|--------|
| MJ20PHY      | NUCLEAR AND PARTICLE PHYSICS | 4      |

Course Content:

**General Properties of Nuclei:** Constituents of nucleus and their Intrinsic properties, quantitative facts about mass, radii, charge density (matter density), binding energy, average binding energy and its variation with mass number, main features of binding energy versus mass number curve, N/A plot, angular momentum, parity, magnetic moment, electric moments, nuclear excited states.

**Nuclear Models:** Liquid drop model approach, semi empirical mass formula and significance of its various terms, condition of nuclear stability, two nucleon separation energies, evidence for nuclear shell structure, nuclear magic numbers, basic assumption of shell model, concept of mean field, residual interaction, concept of nuclear force.

**Radioactive Decay:** (a) Alpha decay: basics of  $\alpha$ -decay processes, theory of  $\alpha$ -emission, Gamow factor, Geiger Nuttall law,  $\alpha$ -decay spectroscopy. (b)  $\beta$ -decay: energy kinematics for  $\beta$ -decay, positron emission, electron capture, neutrino hypothesis. (c) Gamma decay: Gamma rays emission & kinematics, internal conversion.

**Nuclear Reactions:** Types of Reactions, Conservation Laws, kinematics of reactions, Q-value, reaction rate, reaction cross section, Concept of compound and direct Reaction, resonance reaction, Coulomb scattering (Rutherford scattering).

**Interaction of Nuclear Radiation with matter:** Energy loss due to ionization (Bethe-Bloch formula), energy loss of electrons, Cerenkov radiation. Gamma ray interaction through matter, photoelectric effect, Compton scattering, pair production, neutron interaction with matter.

**Nuclear Radiation Detectors:** Behavior of ion pairs in electric field, Gas detectors: estimation of electric field, mobility of particle, for ionization chamber and GM Counter. Basic principle of Scintillation Detectors and construction of photo-multiplier tube (PMT). Semiconductor Detectors (Si and Ge) for charge particle and photon detection (concept of charge carrier and mobility), neutron detector.

**Particle Accelerators:** Accelerator facility available in India: Van-de Graaff Generator (Tandem accelerator), Linear accelerator, Cyclotron, Synchrotrons.

**Particle Physics:** Particle interactions; basic features, types of particles and its families. Symmetries and Conservation Laws: energy and momentum, angular momentum, Parity, Baryon number, Lepton

**RKDF UNIVERSITY RANCHI**  
**B.Sc. PHYSICS**

number, Isospin, Strangeness and Charm, Concept of quark model, Color quantum number and gluons.

| <b>MJL20PHY</b>     | <b>NUCLEAR AND PARTICLE PHYSICS LAB</b> | <b>4</b>      |

1. Measurement of susceptibility of paramagnetic solution.
2. To measure the magnetic susceptibility of solids
3. Verification of Curie law of ferromagnetism.
4. To measure the dielectric constant of Dielectric materials.
5. To determine the refractive index of a dielectric layer using SPR.
6. To draw the BH curve of Fe using solenoid and determine the energy loss from Hysteresis.
7. To determine the Hall coefficient of a semiconductor.
8. To study V-I characteristics of PN junction diode, and light emitting diode.
9. To study the V-I characteristics of a Zener diode and its uses as voltage regulator.
10. Study of V-I and power curves of solar cells, and find the maximum power point and efficiency.
11. To study the characteristics of a Bipolar junction Transistor in Reconfiguration.
12. To design a CE transistor amplifier of a given gain using voltage divider bias.
13. To add two dc voltages using op-amp in inverting and non –inverting mode.
14. To investigate the use of an op-amp as an Integrator.
15. To investigate the use of an amp as a Differentiator.

|--------------|------------------------------------|--------|
| AMJ01JOU     | PHYSICS OF DEVICES AND INSTRUMENTS | 3      |

**Course Learning Outcomes:**

At the successful completion of the course the student is expected to master the following.

1. Metal oxide semiconductors, UJT, JFET, MOSFET, Charge coupled Devices and Tunnel Diode.
2. Power Supply and the role of Capacitance and Inductance filters.
3. Active and passive filters and various types of filters.
4. Multi vibrators using transistors, Phase locked loops, voltage controlled oscillators
5. Basics of photolithography for IC fabrication, about masks and etching.
6. Concepts of parallel and serial communication and knowledge of USB standards and GPIB.
7. Basic idea of communication including different modulation techniques.

**Skills to be learned:**

1. Acquire knowledge and skills to understand the Physics of the following devices and instruments and practical knowledge to use them by doing experiments in laboratory.
  - (i) UJT
  - (ii) BJT
  - (iii) MOSFET
  - (iv) CCD
  - (v) Tunnel Diodes
  - (vi) Various types of Power Supplies
  - (vii) Various types of Filters
  - (viii) Multivibrators and oscillators

**Course Content:**

Devices: Characteristic and small signal equivalent circuits of UJT and JFET. Metal - semiconductor Junction. Metal oxide semiconductor (MOS) device. Ideal MOS and Flat Band voltage. SiO<sub>2</sub>-Si based MOS. MOSFET– their frequency limits. Enhancement and Depletion Mode MOSFETS, CMOS. Charge coupled devices. Tunnel diode.

Power supply and Filters: Block Diagram of a Power Supply, Qualitative idea of C and L Filters. IC Regulators, Line and load regulation, Short circuit protection.

## RKDF UNIVERSITY RANCHI

### B.Sc. PHYSICS

Active and Passive Filters, Low Pass, High Pass, Band Pass and band Reject Filters. Multivibrators: Astable and Monostable Multivibrators using transistors.

Phase Locked Loop (PLL): Basic Principles, Phase detector (XOR & edge triggered), Voltage Controlled Oscillator (Basics, varactor). Loop Filter– Function, Loop Filter Circuits, transient response, lock and capture. Basic idea of PLL IC (565 or 4046)

Processing of Devices: Basic process flow for IC fabrication, Electronic grade silicon. Crystal plane and orientation. Defects in the lattice. Oxide layer. Oxidation Technique for Si. Metallization technique. Positive and Negative Masks. Optical lithography. Electron lithography. Feature size control and wet anisotropic etching. Lift off Technique. Diffusion and implantation.

Digital Data Communication Standards: Serial Communications: RS232, Handshaking, Implementation of RS232 on PC. Universal Serial Bus (USB): USB standards, Types and elements of USB transfers. Devices (Basic idea of UART). Parallel Communications: General Purpose Interface Bus (GPIB), GPIB signals and lines, Handshaking and interface management, Implementation of a GPIB on a PC. Basic idea of sending data through a COM port.

Introduction to communication systems: Block diagram of electronic communication system, Need for modulation. Amplitude modulation. Modulation Index. Analysis of Amplitude Modulated wave. Sideband frequencies in AM wave. CE Amplitude Modulator. Demodulation of AM wave using Diode Detector. basic idea of Frequency, Phase, Pulse and Digital Modulation including ASK, PSK, FSK.

| <b>AMJL01PHY</b>    | <b>PHYSICS OF DEVICES AND INSTRUMENTS</b> | <b>1</b>      |

**PRACTICALS:**

1. To design a power supply using bridge rectifier and study effect of C-filter.
2. To design the active Low pass and High pass filters of given specification.
3. To design the active filter (wide band pass and band reject) of given specification.
4. To study the output and transfer characteristics of a JFET.
5. To design a common source JFET Amplifier and study its frequency response.
6. To study the output characteristics of a MOSFET
7. To study the characteristics of a UJT and design a simple Relaxation Oscillator.
8. To design an Amplitude Modulator using Transistor.
9. To design PWM, PPM, PAM and Pulse code modulation using ICs.
10. To design an A stable multi vibrator of given specifications using transistor.
11. To study a PLL IC (Lock and capture range).
12. To study envelope detector for demodulation of AM signal.
13. Study of ASK and FSK modulator.
14. Glow an LED via USB port of PC.
15. Sense the input voltage at a pin of USB port and subsequently glow the LED connected with another pin of USB port.

| Subject Code | Paper Name              | Credit |
|--------------|-------------------------|--------|
| AMJ02PHY     | EXPERIMENTAL TECHNIQUES | 3      |

**Course Learning Outcomes:**

At the end of the course the student should be conversant with the following.

1. About accuracy and precision, different types of errors and statistical analysis of data.
2. About Noise and signal, signal to noise ratio, different types of noises and their identification.
3. Concept of electromagnetic interference and necessity of grounding.
4. About transducers and basic concepts of Instrumentation-Different types of transducers and sensors.
5. Working of a digital multi meter.
6. Vacuum systems including ultrahigh vacuum systems.
7. Conduct Experiments using different transducers including LVDT and gain hands on experience and verify the theory.

**Skills to be learned:**

1. Develop skills to analyses data, make approximation and perform error analysis using basic methods of statistics.
2. Learn the working principle of transducers, their application and study of the efficiency. Develop understanding of analog and digital instruments and learn to use them in making physical measurements.
3. Develop their understanding of signal, noise, and fluctuations in making physical measurements.
4. Understanding of Impedances Bridges, Q meters as well as vacuum systems using various types of pumps and pressure gauges.

**Course Content:**

**Measurements:**

**Accuracy and precision. Significant figures. Error and uncertainty analysis.**

Types of errors: Gross error, systematic error, random error. Statistical analysis of data (Arithmetic mean, deviation from mean, average deviation, standard deviation, chi-square) and curve fitting. Gaussian distribution.

**Signals and Systems:**

Periodic and aperiodic signals. Impulse response, transfer function and frequency response of first and

## RKDF UNIVERSITY RANCHI

### B.Sc. PHYSICS

second order systems. Fluctuations and Noise in measurement system. S/N ratio and Noise figure. Noise in frequency domain. Sources of Noise: Inherent fluctuations, Thermal noise, Shot noise, 1/f noise

#### **Shielding and Grounding:**

Methods of safety grounding. Energy coupling. Grounding. Shielding: Electrostatic shielding. Electromagnetic Interference.

#### **Transducers & industrial instrumentation (working principle, efficiency, applications):**

Static and dynamic characteristics of measurement Systems. Generalized performance of systems, Zero order first order, second order and higher order systems. Electrical, Thermal and Mechanical systems. Calibration. Transducers and sensors. Characteristics of Transducers. Transducers as electrical element and their signal conditioning. Temperature transducers: RTD, Thermistor, Thermocouples, Semiconductor type temperature sensors (AD590, LM35, LM75). Linear Position transducer: Strain gauge, Linear variable differential transformer (LVDT), Capacitance change transducers. Radiation Sensors: Principle of Gas filled detector, ionization chamber, scintillation detector.

#### **Digital Multimeter:**

Comparison of analog and digital instruments. Block diagram of digital multimeter, principle of measurement of I, V, C. Accuracy and resolution of measurement.

**Impedance Bridges and Q-meter:** Block diagram and working principles of RLC bridge.

**Q-meter and its working operation. Digital LCR bridge.**

#### **Vacuum Systems:**

Characteristics of vacuum: Gas law, Mean free path. Application of vacuum. Vacuum system-Chamber, Mechanical pumps, Diffusion pump & Turbo Modular pump, Pumping speed, Pressure gauges (Pirani, Penning, ionization).

#### **Reference Books:**

**PRACTICALS:**

Determine output characteristics of a LVDT & measure displacement using LVDT

1. Measurement of Strain using Strain Gauge.
2. Measurement of level using capacitive transducer.
3. To study the characteristics of a Thermostat and determine its parameters.
4. Study of distance measurement using ultrasonic transducer.
5. Calibrate Semiconductor type temperature sensor (AD590, LM35, or LM75)
6. Comparison of pickup of noise in cables of different types (co-axial, single shielded, double shielded, without shielding) of 2m length, understanding of importance of grounding using function generator of mV level & an oscilloscope.
7. To design and study the Sample and Hold Circuit.
8. Design and analyze the Clippers and Clampers circuits using junction diode
9. To plot the frequency response of a microphone.
10. To measure Q of a coil and influence of frequency, using a Q-meter.

**Reference Books:**

| AMJ03PHY     | Optical instruments, Laser and Electrodynamics | 3      |

Unit - 1

**1. Optical Instruments:**

Cardinal points of a lens system- two thin lenses separated by a distance (derivation) Spherical aberration – reducing spherical aberration. Chromatic Aberration in lens, Achromatic combination of lenses in contact, and separated by a distance(calculus method) Huygen’s and Ramsden eye pieces. Resolving power of telescope and microscope.

**2. Lasers:**

General principles of lasers – Properties of lasers action spontaneous and stimulated emission of radiation, population inversion, optical pumping. He-Ne laser (Principle and working) Semiconductor laser, Laser applications, Holography.

Unit - 2

**3. Vector analysis:**

**Scalar and vector fields, gradient, divergence and curl (qualitative) and their physical significance, vectors identities-**

- $\text{Div}(\text{grad } S) = \nabla^2 S$
- $\text{Curl}(\text{grad } S) = 0$
- $\text{Curl curl } \mathbf{A} = \text{grad}(\text{div } \mathbf{A}) - \nabla^2 \mathbf{A}$
- $\text{Div curl } \mathbf{A} = 0$
- $\text{Curl}(\mathbf{A} \times \mathbf{B}) = \mathbf{A} \text{ div } \mathbf{B} - \mathbf{B} \text{ div } \mathbf{A}$
- Prove that  $\nabla(\nabla \cdot \mathbf{A}) = \nabla^2 \mathbf{A} + \text{Curl curl } \mathbf{A}$
- If  $\mathbf{r}$  is the position vector of a point, Prove that  $\text{curl } \mathbf{r} = 0$

**Statement and proof of theorems of Gauss and Stokes.**

**4. Electrostatics:**

Static electric charge, Coulombs law , the electrostatic field and Gauss’s law, the electric potential, poisson and Laplace equation (vector notation). Application of Gauss law: Field outside a charged sphere and cylinder.

**RKDF UNIVERSITY RANCHI**  
**B.Sc. PHYSICS**

**5. Magneto static:**

Study current, Biot – Savart law, Magnetic field at a point due to a straight current carrying conductor, magnetic field at any point on the axis of a circular coil carrying current, field at the center of the coil, and magnetic field on the axis of a solenoid (at the centre and at one end).

**Unit - 3**

**6. Electro magnetism:**

Non –steady currents and charges, Faraday’s laws of electro magnetic induction, concept of dipole, Ampere’s circuital law, current loop as a dipole, torque on a dipole, Maxwell’s field equations (derivation) Equation of continuity, displacement current. Equation for a plane electro magnetic waves:  
1) Electromagnetic waves in free space 2) electromagnetic waves in isotropic non-conducting medium.(dielectric) Poynting vector (derivation),.. Production of electromagnetic waves - Hertz experiment.

**Reference Books:**

**Lab Experiments:**

1. Types of error (examples of from any of the experiments)
2. Analysis of random error (Binomial Distribution coin tossing)
3. Analysis of random error (Gaussian Distribution Length/distance)
4. Damped Oscillations.
5.  $B_H$  using Helmholtz Galvanometer.
6. Measurements of low resistances using potentiometer.
7. Field along the axis of a circular coil.
8. Determination of specific conductance of electrolyte.
9. Plot a graph of temperature difference between the two junctions and thermo e.m.f of thermo couple using potentiometer.
10. Desauty's bridge using B.G./Spot galvanometer/head phone.
11. Dispersive power of a prism.
12. Cauchy's Constant.
13. R.P. of grating
14. R.P. of telescope
15. L.B. Photometer
16. Searles goniometer.
17. Verification of Newton's formula for a lens separated by a distance.
18. Liquid lens (R.I.)
19. Determination of R.I. using Laser.
20. Determination of  $\mu_o$  and  $\mu_e$  using Laser/Monochromatic source.
21. Diffraction grating using Laser (Determination of  $\lambda$ )
22. Diameter of a wire using Laser.

| Subject Code | Paper Name             | Credit |
|--------------|------------------------|--------|
| RC-01        | Communication Research | 4      |

**Objectives:**

- To explain various aspects of science and research with focus on mass media, Element of Research, its related parameters and discuss Qualitative Research methods including analysis of Qualitative and Quantitative data.
- To enable the student to interpret gathering Survey data , overcome problem and APA Style in Research report writing

**Learning Outcomes:**

After completion of the course, the student will be able to:

- Explain the meaning and type of research
- Identify the element of research and other related concept.
- Discuss Qualitative research method and explain analysis of data.
- Name the essentials of report writing, its structure and style.

**Unit-1 : Introduction to Research**

Introduction to Research: Meaning and Definition of Research, Types of Research, Difference between Qualitative and Quantitative Research Approaches, Characteristic of Good Research

Steps of Research Research: Research Methods, Research Methodology, Research Processes

Types of Communication Research Problem Formulation: Research Problem,

Hypothesis: Meaning of Hypothesis, Types of Hypothesis Characteristics of Hypothesis, Procedure for Hypothesis Testing, Mass Media Research : Print Media Research Electronic Media Research, Advertising Research, Public Relations Research.

**Unit-2: Methods of Media Research**

Elements of Communication Research-quantity research Survey Research -Types of Surveys : Questionnaire survey, Interview, Telephonic survey, Mail survey, Internet survey, Public Opinion Survey, Pre-Election and Exit Poll Content Analysis : Meaning and Definition of Content Analysis, Purpose of Content Analysis, Methods of Content Analysis, advantages of content analysis, limitations of content analysis Research Design .

**RKDF UNIVERSITY RANCHI**  
**B.Sc. PHYSICS**

**Unit-3: Research Tools**

Research Tools, Sampling and Data Analysis Data and its Types : Collection of Primary Data Observation method, Interview method Questionnaire method, Schedules, Secondary data Census and Sampling : Census, Purpose of census, Sampling, Different types of sampling Data Evaluation Techniques : Classification and Tabulation of data,

**Unit-4 : Ethics and Report Writing**

Research Report: Shape of a Research Report, Writing a Research Report, Referencing, Writing a bibliography, Ethics : Definition of Ethics, Reasons to be Ethical, Ethical Responsibilities of a Researcher

**Suggested Readings:**

A research report is a reliable source to recount details about conducted research. It is most often considered to be a true testimony of all the work done to garner specificities of research.

Research reports present the results of formal investigations into the properties, behavior, structures, and principles of material and conceptual entities. Almost any physical phenomenon or concept may be investigated in a research framework. The following are some key differences between formal research, and other less structured kinds of inquiry.

1. *Problem definition*: the rigorous reduction of the inquiry to a narrow question with a quantifiable answer. The most significant preliminary phase of research writing is that of effective problem definition. This process is one of identifying an interesting question and narrowing the research inquiry to a manageable size.
2. *Research approach*: the structuring of the research according to a methodology associated with a specialized field of inquiry. Specialized fields have research methodologies that are followed in investigating problems. These range from general methods of interviewing and literature researching to highly specialized procedures for using materials and mechanical devices to establish appropriate conditions for generating data. Adapting a sound research methodology to the investigation of your problem is a major milestone in the conduct of your inquiry.
3. *Research report*: the presentation of the research and its results in a rigorously formatted document that follows a conventional structure. In presenting your research, you pull all its elements together into a focused, coherent document. Research reports contain a standard set of elements that include.

| MN01PHY      | INTRODUCTORY PHYSICS | 3      |

**Course Learning Outcomes:**

After going through the course, the student should be able to

1. Introduce Physics, Physics and Technology, Symmetry in nature and Conservation laws, Fundamental forces in nature.
2. Explain and differentiate the vector (electric fields, Coulomb's law) and scalar (electric potential, electric potential energy) formalisms of electrostatics.
3. Apply Gauss's law of electrostatics to solve a variety of problems.
4. Solve Laplace's and Poisson equation.
5. Describe the magnetic field produced by magnetic dipoles and electric currents.
6. Will be able to demonstrate his/her understanding of Interference, Diffraction and Polarization of light.
7. Explain and differentiate the Zeroth, First, Second and Third law of thermodynamics.
8. Explain the dual nature of matter and radiation, Uncertainty Principle.
9. Describe the basic understanding of radioactivity, mean life, half-life and nuclear fission and fusion.
10. Demonstrate basic understanding of Analog and Digital Electronics.
11. Understand the concepts of Special theory of Relativity.

**Skills to be learned:**

1. This course will develop a liking for the subject and students may explore it as a pre-course towards selection of minor subject papers in the undergraduate program.
2. Basic understanding of Physics as a subject of Natural Science.

**Course Content:**

1. Introduction: What is Physics? Scope of Physics, Physics and Technology, Fundamental forces in nature. Conserved quantities, Conservation laws and Symmetry.

## RKDF UNIVERSITY RANCHI

### B.Sc. PHYSICS

2. Vector Calculus: Scalar and Vector fields. Gradient of a scalar field and its geometrical interpretation. Divergence and curl of a vector field. Del and Laplacian operators. Vector identities. Line, surface and volume integrals of Vector fields. Flux of a vector field. Gauss' divergence theorem, Green's and Stokes Theorems and their applications (no rigorous proofs)
3. Mechanics: Review of Newton's Laws of Motion. Impulse. Dynamics of a system of particles. Centre of Mass. Principle of conservation of momentum. Angular momentum of a particle and system of particles. Torque. Principle of conservation of angular momentum. Moment of Inertia. Kinetic energy of rotation. Motion involving both translation and rotation. Elastic constants and interrelation between them. Twisting torque on a Cylinder or Wire. Surface tension, Surface energy, Ripples and Gravity waves. Temperature dependence of Surface Tension. Viscosity, Velocity profile: Poiseuille's Equation for Flow of a Liquid through a Capillary Tube and the corrections.
4. Electricity and Magnetism: Electric field: Electric field lines. Electric flux. Gauss' Law with applications to charge distributions with spherical, cylindrical and planar symmetry. Electrostatic Potential. Laplace's and Poisson Equations. Solution of Laplace's equation. Potential and Electric Field due to a dipole. Force and Torque on a dipole. Polarization, Polarization Charges. Electrical Susceptibility and Dielectric Constant. Displacement vector  $D$ . Relations between  $E$ ,  $P$  and  $D$ . Gauss' Law in dielectrics. Magnetic force between current elements and definition of Magnetic Field  $B$ , Magnetic Intensity,  $H$  and Magnetization Vector  $M$ . Current Loop as a Magnetic Dipole and its Dipole Moment (Analogy with Electric Dipole). Ampere's Circuital Law. Properties of  $B$ : curl and divergence. Vector Potential. Magnetic Force on (1) on point charge (2) on current carrying wire (3) between current elements. Torque on a current loop in a uniform Magnetic Field.
5. Optics: Interference of light, Division of amplitude and wavefront. Young's double slit experiment. Diffraction of light, Fresnel and Fraunhofer diffraction. Polarization of light. Description of Linear, Circular and Elliptical Polarization
6. Thermal Physics: Thermodynamic Equilibrium, Zeroth Law of Thermodynamics & Concept of Temperature, Concept of Work & Heat, First Law of Thermodynamics and its differential form, Internal Energy, First Law & various processes. Work done during Isothermal and Adiabatic Processes. Reversible and Irreversible process with examples. Heat Engines. Carnot's Cycle, Carnot engine & efficiency. Refrigerator & coefficient of performance, 2nd Law of Thermodynamics: Kelvin-Planck and Clausius Statements. Concept of Entropy, Entropy Changes in Reversible and Irreversible processes. Principle of Increase of Entropy. Temperature-Entropy diagrams for Carnot's Cycle. Third Law of Thermodynamics (Nernst's Heat Theorem). Unattainability of Absolute Zero.

## RKDF UNIVERSITY RANCHI

### B.Sc. PHYSICS

7. Elements of Modern Physics: Wave-particle duality, Photo-electric effect and Compton scattering. De Broglie wavelength and matter waves; Davisson-Germer experiment. Heisenberg uncertainty principle (Uncertainty relations involving Canonical pair of variables) and some applications: Energy-time uncertainty principle. Schrodinger equation; Position, Momentum and Energy operators; physical interpretation of a wave function, probabilities and normalization; Law of radioactive decay; Mean life and half-life; Elementary idea of fission and fusion.
8. Basic Electronics: P and N type semiconductors. Energy Level Diagram. Barrier Formation in PN Junction Diode. Current Flow Mechanism in Forward and Reverse Biased Diode. Half-wave Rectifier. Centre-tapped Full-wave Rectifiers, Ripple Factor and Rectification Efficiency, Zener Diode and Voltage Regulation. n-p-n and p-n-p Transistors. DC Characteristics of transistor in CE
9. Configurations. Current gains  $\alpha$  and  $\beta$ . Binary Numbers. Decimal to Binary and Binary to Decimal Conversion. Octal and Hexadecimal numbers. AND, OR and NOT Gates. De Morgan's Theorems. NAND and NOR Gates as Universal Gates. XOR and XNOR Gates. Boolean Laws. Binary Addition. 1's and 2's complement.
10. Special Theory of Relativity: Galilean transformation, Postulates of Special Theory of Relativity. Lorentz Transformations. Length contraction, Time-dilation, and relativistic variation of mass.

**B.Sc. PHYSICS**  
**SEMESTER – III**

| Subject Code | Paper Name | Credit |
|--------------|------------|--------|
| MN03PHY      | MECHANICS  | 3      |

**Course Objectives:**

This course is designed:

1. Chemical aspects of some common health hazards.
2. Physics of some common useful materials

**Course Learning Outcomes:**

On successful completion of this course the student should be able to:

1. Understand laws of motion and their application to various dynamical situations, notion of inertial frames and concept of Galilean invariance. He / she will learn the concept of conservation of energy, momentum, angular momentum and apply them to basic problems.
2. Understand the analogy between translational and rotational dynamics, and application of both motions simultaneously in analyzing rolling with slipping.
3. Write the expression for the moment of inertia about the given axis of symmetry for different uniform mass distributions.
4. Understand the phenomena of collisions and idea about center of mass and laboratory frames and their correlation.
5. Understand the principles of elasticity through the study of Young Modulus and modulus of rigidity.
6. Understand simple principles of fluid flow and the equations governing
7. fluid dynamics.
8. Apply Kepler's law to describe the motion of planets and satellite in circular orbit, through the study of law of Gravitation.
9. Explain the phenomena of simple harmonic motion and the properties of systems executing such motions.
10. Describe how fictitious forces arise in a non-inertial frame, e.g., why a person sitting in a merry-go-round experiences an outward pull.
11. Describe special relativistic effects and their effects on the mass and energy of a moving object.

**RKDF UNIVERSITY RANCHI**  
**B.Sc. PHYSICS**

**Skills to be learned:**

1. Understand the analogy between translational
2. Rotational dynamics and application of both motions simultaneously in analyzing rolling with slipping.

**Course Content:**

**Vectors:**

**Vector algebra. Scalar and vector products. Derivatives of a vector with respect to a parameter.**

**Ordinary Differential Equations:**

1st order homogeneous differential equations. 2<sup>nd</sup> order homogeneous differential equations with constant coefficients.

**Laws of Motion:**

Frames of reference. Newton's Laws of motion. Dynamics of a system of particles. Centre of Mass.

**Momentum and Energy:** Conservation of momentum. Work and energy. Conservation of energy. Motion of rockets.

**Rotational Motion:**

Angular velocity and angular momentum, Torque, Conservation of angular momentum.

**Gravitation:**

Newton's Law of Gravitation. Motion of a particle in a central force field (motion is in a plane, angular momentum is conserved, areal velocity is constant). Kepler's Laws (statement only). Satellite in circular orbit and applications. Geosynchronous orbits. Basic idea of global positioning system (GPS). Weightlessness. Physiological effects on astronauts.

**Oscillations:**

Simple harmonic motion. Differential equation of SHM and its solutions. Kinetic and Potential Energy, Total Energy and their time averages. Damped oscillations.

**Elasticity:**

Hooke's law - Stress-strain diagram - Elastic moduli-Relation between elastic constants - Poisson's Ratio-Expression for Poisson's ratio in terms of elastic constants - Work done in stretching and work done in twisting a wire – Twisting couple on a cylinder - Determination of Rigidity modulus by static

**RKDF UNIVERSITY RANCHI**  
**B.Sc. PHYSICS**

torsion – Torsional pendulum-Determination of Rigidity modulus and moment of inertia -  $q$ ,  $\eta$  and  $\sigma$  by Searles method.

**Fluids: Surface Tension:** Synclastic and anticlastic surface - Excess of pressure -Application to spherical and cylindrical drops and bubbles - variation of surface tension with temperature - Jaegar's method. Viscosity - Rate flow of liquid in a capillary tube - Poiseuille's formula - Determination of coefficient of viscosity of a liquid - Variations of viscosity of liquid with temperature-lubrication.

**Speed Theory of Relativity:**

Constancy of speed of light. Postulates of Special Theory of Relativity. Length contraction. Time dilation. Relativistic addition of velocities.

*Note: Students are not familiar with vector calculus. Hence all examples involve differentiation either in one dimension or with respect to the radial coordinate.*

| MN05PHY      |            | 3      |

**Course Learning Outcomes:**

On successful completion of this course the student should be able to:

1. Demonstrate Gauss law, Coulomb's law for the electric field, and apply it to systems of point charges as well as line, surface, and volume distributions of charges.
2. Explain and differentiate the vector (electric fields, Coulomb's law) and scalar (electric potential, electric potential energy) formalisms of electrostatics.
3. Apply Gauss's law of electrostatics to solve a variety of problems.
4. Articulate knowledge of electric current, resistance and capacitance in terms of electric field and electric potential.
5. Demonstrate a working understanding of capacitors.
6. Describe the magnetic field produced by magnetic dipoles and electric currents.
7. Explain Faraday-Lenz and Maxwell laws to articulate the relationship between electric and magnetic fields.
8. Understand the dielectric properties, magnetic properties of materials and the phenomena of electromagnetic induction.
9. Describe how magnetism is produced and list examples where its effects are observed.
10. Apply Kirchhoff's rules to analyze AC circuits consisting of parallel and/or series combinations of voltage sources and resistors and to describe the graphical relationship of resistance, capacitor and inductor.
11. Apply various network theorems such as Superposition, Thevenin, Norton, Reciprocity, Maximum Power Transfer, etc. and their applications in electronics, electrical circuit analysis, and electrical machines.

In the laboratory course the student will get an opportunity to verify various laws in electricity and magnetism such as Lenz's law, Faraday's law and learn about the construction, working of various measuring instruments.

**RKDF UNIVERSITY RANCHI**  
**B.Sc. PHYSICS**

**Skills to be learned:**

- This course will help in understanding basic concepts of electricity and magnetism and their applications.
- Basic course in electrostatics will equip the student with required prerequisites to understand electrodynamic phenomena.

**Course Content:**

- **Vector Analysis:**

Scalar and Vector product, gradient, divergence, Curl and their significance, Vector Integration, Line, surface and volume integrals of Vector fields, Statement of Gauss-divergence theorem and Stoke's theorem of vectors.

- **Electrostatics:**

Electrostatic Field, electric flux, Gauss's theorem of electrostatics. Applications of Gauss theorem- Electric field due to point charge, infinite line of charge, uniformly charged spherical shell and solid sphere, plane charged sheet, charged conductor. Electric potential as line integral of electric field, potential due to a point charge, electric dipole, uniformly charged spherical shell and solid sphere. Calculation of electric field from potential. Capacitance of an isolated spherical conductor. Parallel plate, spherical and cylindrical condenser. Energy per unit volume in electrostatic field. Dielectric medium, Polarisation, Displacement vector. Gauss's theorem in dielectrics. Parallel plate capacitor completely filled with dielectric. (22 Lectures)

- **Magnetism:**

Magnetostatics: Biot-Savart's law and its applications- straight conductor, circular coil, solenoid carrying current. Divergence and curl of magnetic field. Magnetic vector potential. Ampere's circuital law. Magnetic properties of materials: Magnetic intensity, magnetic induction, permeability, magnetic susceptibility. Brief introduction of dia-, para- and ferromagnetic material

- **Electromagnetic Induction:**

Faraday's laws of electromagnetic induction, Lenz's law, self and mutual inductance, L of single coil, M of two coils. Energy stored in magnetic field.

**RKDF UNIVERSITY RANCHI**  
**B.Sc. PHYSICS**

• **Maxwell's equations and Electromagnetic wave propagation:**

Equation of continuity of current, Displacement current, Maxwell's equations, Poynting vector, energy density in electromagnetic field, electromagnetic wave propagation through vacuum and isotropic dielectric medium, transverse nature of EM waves, polarization.

**Reference Books:**

**Course Learning Outcomes:**

This course will enable the student to

1. Recognize and use a mathematical oscillator equation and wave equation, and derive these equations for certain systems.
2. Apply basic knowledge of principles and theories about the behaviour of light and the physical environment to conduct experiments.
3. Understand the principle of superposition of waves, so thus describe the formation of standing waves.
4. Explain several phenomena we can observe in everyday life that can be explained as wave phenomena.
5. Use the principles of wave motion and superposition to explain the Physics of polarization, interference and diffraction
6. Understand the working of selected optical instruments like biprism, interferometer, diffraction grating, and holograms.
7. In the laboratory course, student will gain hands-on experience of using various optical instruments and making finer measurements of wavelength of light using Newton Rings experiment, Fresnel Biprism etc. Resolving power of optical equipment can be learnt firsthand.
8. The motion of coupled oscillators, study of Lissajous figures and behaviour of transverse, longitudinal waves can be learnt in this laboratory course.

**Skills to be learned:**

1. He / she shall develop an understanding of various aspects of harmonic oscillations and waves specially.
  - a. Superposition of collinear and perpendicular harmonic oscillations
  - b. Various types of mechanical waves and their superposition.

This course in basics of optics will enable the student to understand various optical phenomena, principles, workings and applications optical instruments.

# RKDF UNIVERSITY RANCHI

## BA English

### Course Content:

**Waves Motion- General:** Transverse waves on a string. Travelling and standing waves on a string. Normal Modes of a string. Group velocity, Phase velocity. Plane waves. Spherical waves, Wave intensity.

**Superposition of Two Collinear Harmonic oscillations:** Linearity & Superposition Principle. Oscillations having equal frequencies and (2) Oscillations having different frequencies(Beats).

**Superposition of Two Perpendicular Harmonic Oscillations:** Graphical and Analytical Methods. Lissajous Figures with equal and unequal frequency and their uses.

**Sound: Simple harmonic motion - forced vibrations and resonance - Fourier's Theorem - Application to saw tooth wave and square wave - Intensity and loudness of sound - Decibels - Intensity levels - musical notes - musical scale. Acoustics of buildings: Reverberation and time of reverberation - Absorption coefficient - Sabine's formula - measurement of reverberation time- Acoustic aspects of halls and auditoria.**

**Wave Optics:** Electromagnetic nature of light. Definition and Properties of wave front. Huygens Principle.

**Interference: Interference: Division of amplitude and division of wavefront. Young's Double Slit experiment. Lloyd's Mirror and Fresnel's Biprism. Phase change on reflection: Stokes' treatment. Interference in Thin Films: parallel and wedge-shaped films. Fringes of equal inclination (Haidinger Fringes); Fringes of equal thickness (Fizeau Fringes). Newton's Rings: measurement of wavelength and refractive index**

**Michelson's Interferometer: Idea of form of fringes (no theory needed), Determination of wavelength, Wavelength difference, Refractive index, and Visibility of fringes.**

**Diffraction: Fraunhofer diffraction- Single slit; Double Slit. Multiple slits and Diffraction grating. Fresnel Diffraction: Half-period zones. Zone plate. Fresnel Diffraction pattern of a straight edge, a slit and a wire using half-period zone analysis. Resolving power of telescope and grating**

**Polarization: Transverse nature of light waves. Plane polarized light – production and analysis. Circular and elliptical polarization.**
