## B.Sc. Microbiology

### SEMESTER - I

Subject Code	Subject title	Credit
MJ01MIC	General Microbiology	3

#### **Unit 1 : Introduction, history and scope of Microbiology**

History, scope, branches of microbiology and relevance of microbiology; Contribution of Antony Van Leeuwenhoek, Edward Jenner, Louis Pasteur, Robert Koch, Joseph Lister, Alexander Fleming, Ivanowsky, Waksman, Subba Rao, Sambhunath De; Position of microorganisms in the living world. 5 kingdom classification of Whittaker and 3 kingdom classification, comparison of the 3 domain of microorganisms- bacteria, archaea, eukarya; Bergey's manual and introduction to classification of bacteria.

#### **Unit 2: Bacterial morphology**

Ultrastructure of bacterial cell, cell wall, plasma membrane, capsule, flagella, nucleoid, and reserve material. Differences between archaebacterial and eubacterial cell. General features of Rickettsia, Chlamydia, Mollicutes, Actinomycetes and Cynobacteria.

#### **Unit 3: Techniques in microbiology I**

Principles of microscopy, construction and application of Compound Microscope (monocular and binocular), Bright field Microscopy, Dark field Microscopy, Phase Contrast Microscopy, Fluorescence Microscopy, Electron Microscopy- TEM and SEM

# RKDF UNIVERSITY RANCHI

## B.Sc. Microbiology

### **Unit 4: Techniques in microbiology II**

Principles, construction and application of centrifuge; bacteriological Incubator & Incubator Shaker; Laminar flow; Colourimeter & Spectrophotometer (UV Vis)

### **Unit 5: Sterilization techniques and control of microorganisms**

Definitions of terms- sterilization and disinfection; Sterilization by Physical methods- Use of moist heat- heat under pressure, autoclave, boiling, pasteurization, fractional sterilization, tyndallization; Use of dry heat- hot air oven, incineration; Filtration- Seitz filter, membrane filter, HEPA filter; Radiation- Ionizing and non- ionizing; Chemical methods- Alcohols, aldehydes, phenols, halogens, metallic salts, ethylene oxide.

### **Unit 6: Isolation, cultivation and preservation of microorganisms**

Culture media and its types; Methods for enumeration & isolation of microorganisms using pour plate, spread plate technique, and streak plate; Isolation of anaerobic microorganisms; Maintenance and preservation of pure culture

### **Unit 7: Stains and staining techniques**

Staining techniques, principles, procedures and applications of Simple staining, negative staining; Differential staining- Gram's staining, acid fast staining, Leishman's staining, Giemsa's staining, Ziehl Neelsen staining; Structural staining- cell wall, capsule, endospore and flagella staining.

# RKDF UNIVERSITY RANCHI

## B.Sc. Microbiology

Subject Code	Subject title	Credit
MJL01MIC	General Microbiology-Lab	1

### PRACTICALS:

- Good laboratory practice in Microbiology and safety measures. Cleaning and sterilization of glassware and equipments. Study of aseptic technique- preparation of cotton plug, wrapping of glassware, transfer of media and Inoculum.
- Study of instruments- Microscope, autoclave, hot air oven, laminar airflow, inoculation loop and needle, incubator, B.O.D incubator, centrifuge machine, pH meter, colony counter, seitz filter, membrane, filter, colourimeter, spectro photometer.
- Preparation of different culture media- nutrient agar/nutrient broth for bacterial culture, PDA for fungal culture. Enumeration of bacteria using spread plate and pour plate techniques. Isolation of bacteria by pour plate, spread plate and streak plate method.
- Staining of bacteria-
  1. Simple staining- methylene blue
  2. Gram's staining
  3. Acid fast staining
  4. Ziehl Neelsen staining
  5. Giemsa staining
  6. Structural staining- capsule, endospore.
  7. Staining of fungi using lactophenol and cotton blue

# RKDF UNIVERSITY RANCHI

## B.Sc. Microbiology

### SEMESTER II

Subject Code	Subject title	Credit
MJ02MIC	Phycology and Virology	3

#### Section A: PHYCOLOGY

##### Unit 1. Classification of Algae

##### Unit 2.

Study of the following classes with reference to genera listed below: (occurrence, thallus organization and life cycles):

- a) Chlorophyceae: Volvox, Coleochaete
- b) Charophyceae: Chara
- c) Diatoms: General features with reference to pinnate and centric diatoms
- d) Xanthophyceae: Vaucheria
- e) Phaeophyceae: Ectocarpus
- f) Rhodophyceae: Polysiphonia
- g) Cyanobacteria: Nostoc, Anabaena, Spirulina, Oscillatoria

##### Unit 3. Applications of algae in Agriculture, Industry, Environment and Food

#### Section B: VIROLOGY

**Unit 4.** Introduction: Discovery of viruses, nature and definition of viruses, general properties of viruses. Concept of viroids, virusoids, satellite viruses and prions. Theories of viral origin.

**Unit 5.** Structure of viruses: Capsid symmetry, enveloped and non-enveloped viruses.

# RKDF UNIVERSITY RANCHI

## B.Sc. Microbiology

**Unit 6.** Isolation, purification and cultivation of viruses.

**Unit 7.** Viral Taxonomy: Classification and nomenclature of different groups of viruses infecting microbes, plants and animals.

**Unit 8.** Salient features of viral genomes: Unusual bases (TMV, T4 phage), overlapping genes ( $\Phi$ X174, Hepatitis B virus), alternate splicing (Picornavirus), terminal redundancy (T4 phage), terminal cohesive ends (lambda phage), ambisense genomes (arenavirus), partial double stranded genomes (Hepatitis B), long terminal repeats (retrovirus), segmented (influenza virus) and non segmented genomes (picornavirus), capping and tailing (TMV)

# RKDF UNIVERSITY RANCHI

## B.Sc. Microbiology

Subject Code	Subject title	Credit
MJL02MIC	Phycology and Virology-Lab	1

### PRACTICALS:

- Use Microscopes, Camera Lucida, Stage and Ocular Micrometers.
- Total Counting of RBC / WBC using haemocytometer.
- Blood Smear Preparation, Differential count of WBC.
- Mounting Buccal Epithelium and observing living cells using vital staining.
- Study of mitotic division using onion root tips. Study of prepared slides of different tissues.
- Use of counting chamber for bacterial count.
- Effect of temperature on bacterial growth.
- Effect of pH on bacterial growth.
- Effect of osmotic pressure (salt and sugar concentration) on bacterial growth.

# RKDF UNIVERSITY RANCHI

## B.Sc. Microbiology

Subject Code	Subject title	Credit
MJ03MIC	Microbial Diversity	3

### Unit 1

Timeline, major discoveries and contribution of important scientists: From 1800 1900: Leeuwenhoek, Jenner, Pasteur, Koch, Gram, Mechnikoff and Ehrlich; Ivanovsky; Winogradsky. From 1900 - 1950: Bergey, Griffith; Fleming; Luria Delbruck; Waksman; Lederberg and Tatum; From 1950 to 2000: Lederberg and Zinder, Benzer; Jacob and Monod, Ames, Temin and Baltimore; Carl Woese and Craig Venter. Microbiological growth techniques: Pure culture techniques, Enrichment, Anaerobic culturing. Staining techniques: Gram's staining, Endospore, Capsule, Acid fast staining.

### Unit 2

Bacterial Diversity: Habitat, structure, physiology & significance of Photo autotrophic bacteria (Cyanobacteria, Green and Purple bacteria), Photo heterotrophic bacteria (Green Non-sulfur and Purple Non-sulfur bacteria) and Chemoautotrophic bacteria (sulfur oxidizers, iron bacteria, hydrogen bacteria). Extremophiles physiological characteristics and significance of (Methanogenic bacteria, Methylotrophs, Halobacteria).

### Unit 3

Ultra-structure of bacterial cell A) Cell wall; B) Surface adherents: capsule and slimelayer; C) Surface appendages: Flagella and Pili; D) Endospores. Bacteriology: Classification, habitat, structure, reproduction & significance of Chemoheterotrophic bacteria (filamentous & gliding bacteria, Gram-Positive (Bacillus, Actinomycetes) and Gram-negative bacteria Spirochetes, Chlamydia, Rickettsia and Mycoplasma).

### Unit 4

Mycology: Thallus morphology and modifications in fungi. Nutrition and physiology of fungi. Reproduction (asexual, sexual and para sexual) characteristics of fungi. Major taxonomic group Of fungi with focus on structure, reproduction, life cycle and significance of the following: representatives: i) Gymnomycota (Cellular slime moulds), ii) Mastigomycota (Phytophthora), iii) Amastigomycota: a) Zygomycotina (Mucor/ Rhizopus), b) Ascomycotina (Saccharomyces), c)

# RKDF UNIVERSITY RANCHI

## B.Sc. Microbiology

Basidiomycotina (Agaricus), d) Deutromycotina (Fusarium). Characteristics and importance of Deuteromycetes.

### **Unit 5**

Baltimore classification of virus. General methods for isolation and cultivation of virus. One step growth curve, burst size and determination of titre value of virus. Concept of Viroids & Prions. General characteristics and life cycle of Bacterial virus (T4 bacteriophage), Plant virus (TMV), Animal virus (e.g. Herpes Simplex)

# RKDF UNIVERSITY RANCHI

## B.Sc. Microbiology

Subject Code	Subject title	Credit
MJL03MIC	Microbial Diversity-Lab	1

1. Preparation of A) Nutrient agar (NA) for bacterial isolation and B) Potato/ Sabouraud Dextrose Agar (PDA/SDA) for fungal/ yeast growth.
1. Isolation and growth of rhizosphere bacteria on NA plate using serial dilution and spread plate method.
2. Isolation and growth of fungal colony on PDA/ SDA plate.
3. Preparation of single bacterial colony using streak plate method.
4. Bacterial identification: Morphological staining and biochemical tests on isolated bacteria.
5. Fungal identification: Spore and hyphal staining and their characteristics.
6. General characteristics and microscopic identification of Bacteria & Fungi.
7. Isolation of plaques from sewage water.

# RKDF UNIVERSITY RANCHI

## B.Sc. Microbiology

### SEMESTER III

Subject Code	Subject title	Credit
MJ04MIC	Cell Biology	3

#### Unit 1. Tools and techniques of Cell Biology

- Microscopic-Principles of Light microscopy; Phase contrast microscopy; Confocal microscopy; Electron microscopy (EM)- scanning EM and scanning transmission EM (STEM); Fluorescence microscopy;
- Analytical-Flow cytometry- flurochromes, fluorescent probe and working principle; Spectrophotometry; Mass spectrometry; X-ray diffraction analysis.
- Separation-Sub-cellular fractionation- differential and density gradient centrifugation; Chromatography- paper, thin-layer, gel-filtration, ion-exchange, affinity and High- Performance Liquid Chromatography (HPLC).

#### Unit 2. Composition of Cells:

- Cell Wall, the Extracellular Matrix and Cell Interactions
- Molecules of cell, cell membranes and cell Proteins, Structure; Transport of small molecules, Endocytosis
- The Nucleus Nuclear Envelope- structure of nuclear pore complex, nuclear lamina, Transport across Nuclear Envelope, Chromatin: molecular organization, Nucleolus and rRNA Processing.
- Mitochondria, Chloroplasts and Peroxisomes- Structural organization, Function
- Marker enzymes, Mitochondrial biogenesis, Protein import in mitochondria, Semiautonomous nature of mitochondria and chloroplast, chloroplast DNA, Peroxisomes' assembly.

# RKDF UNIVERSITY RANCHI

## B.Sc. Microbiology

**Unit 3.** Protein Sorting and Transport - The Endoplasmic reticulum, The Golgi Apparatus, Mechanism of Vesicular Transport, Lysosomes.

**Unit 4.** Cytoskeleton and Cell Movement- Structure and organization of actin filaments; actin, myosin and cell movement; intermediate filaments; microtubules.

**Unit 5.** Cell Signaling - Signaling molecules and their receptor; functions of cell surface receptors; Intracellular signal transduction pathway; signaling networks.

**Unit 6.** The Cell Cycle- Eukaryotic Cell Cycle, Regulation of Cell cycle progression, Events of Mitotic Phase, Meiosis.

**Unit 7.** Programmed Cell Death, Stem Cells and Maintenance of adult tissues, Embryonic Stem Cells and Therapeutic cloning.

**Unit 8.** Cancer- Development and Causes of Cancer, Tumor Viruses, Oncogenes, Tumor Suppressor genes, Cancer Treatment- molecular approach.

### Reference Books:

- Nelson DL and Cox MM (2008) Lehninger Principles of Biochemistry, 5th Edition., W.H. Freeman and Company.
- Karp, G. (2010). Cell Biology, John Wiley & Sons, U.S.A. 6th edition.
- Hardin, J., Becker, G., Skliensmith, L.J. (2012). Becker's World of the Cell, Pearson Education Inc. U.S.A. 8th edition.

# RKDF UNIVERSITY RANCHI

## B.Sc. Microbiology

Subject Code	Subject title	Credit
MJL04MIC	Cell Biology-Lab	1

### PRACTICALS:

1. To study activity of any enzyme under optimum conditions.
2. To study the effect of pH, temperature on the activity of salivary amylase enzyme.
3. Determination of - pH optima, temperature optima, Km value, Vmax inhibitor (Inorganic phosphate) on the enzyme activity.
4. Estimation of blood glucose by glucose oxidase method.
5. Preparation of buffers.
6. Separation of Amino acids by paper chromatography.
7. Qualitative tests for Carbohydrates, lipids and proteins
  - Study the effect of temperature and organic solvents on semi permeable membrane.
  - Demonstration of dialysis.
  - Study of plasmolysis and de Cell fractionation and determination of enzyme activity in organelles using sprouted seed or any other suitable source.
8. Study of structure of any Prokaryotic and Eukaryotic cell

# RKDF UNIVERSITY RANCHI

## B.Sc. Microbiology

Subject Code	Subject title	Credit
MJ05MIC	Microbial Physiology & Biochemistry	3

### Unit1

#### Biomolecules

- 1) Carbohydrates-Chemical structure, nature and properties, classification and importance in biological cells
- 2) Aminoacidsandproteins-Chemicalstructure,natureandproperties,classification, Proteolysis, transamination, deamination
- 3) Lipids and hormones- Saturated and unsaturated fatty ac ids, structure, classification, properties and function of lipids, oxidation of lipids Hormones: steroid hormones, structure and fuction
- 4) Nucleic Acid: Basic constituent of DNA, RNA mRNA, tRNA, rRNA

### Unit 2

#### Microbial Enzyme

- a) Nature and structural properties, Nomenclature and classification.
- b) Enzyme kinetic s- Energy of Activation, catalytic site, Interaction of enzyme substrate, Km, Inhibition, Activation.
- c) Factors affecting Enzyme activity: Enzyme concentration, substrate concentration, Temperature, pH

### Unit3.

#### Microbial growth

- a) Definition of growth, growth curveve, Mathematical expression of growth, rate, generation time.
- b) Batch and continuous culture, synchronous growth, diauxic growth.
- c) Factors affecting microbial growth such as temperature, pH, O2concentration, radiation, pressure

# RKDF UNIVERSITY RANCHI

## B.Sc. Microbiology

### Unit 4

#### Microbial Energetic

- a) Principal of bioenergetics and high energy phosphate compound. Mode of energy producti on- phosphorylation
- b) Concept of anabolism and catabolism
- c) Chemo organotrophic catabolic process or energy yielding process, Aerobic respiration: Glycolysis, EM pathway, PP pathway, TCA, Electron transport and oxidative phosphorylation. Anaerobic respiration, fermentation
- d) Phototrophy- Light reaction in oxygenic photosynthesis, light reaction in anoxygenic Photosynthesis.

### Unit5.

#### Nitrogen Fixation

- a) Physiology of nitrogen cycle. Assimilatory and dissimilatory nitrate eduction, biological nitrogen fixation. Nitrogen fixers and mechanism of nitrogen fixation, properties of nitrogenase, and ammonia assimilation.
- b) Genetics of nitrogen fixation and regulation of nitrogenase activity and synthesis.

10. Zube’s Biochemistry.4th Edition Macmillan

# RKDF UNIVERSITY RANCHI

## B.Sc. Microbiology

Subject Code	Subject title	Credit
MJL05MIC	Microbial Physiology & Biochemistry-Lab	1

### PRACTICALS:

1. Use and calibration of pH meter and preparation of buffers. Preparation of stock and working solutions. Handling of pipettes and micropipettes and checking their accuracy.
2. **Qualitative tests**
  - a) Carbohydrates: Molisch's Test, Fehling's Test, Benedict's Test, Iodine Test)  
Amino acids and Proteins: Ninhydrin test, Biuret test, Lowry's assay.  
Lipids: Solubility Test, Translucent Spot Test, Emulsification Test.
  - b) Quantitative estimation of carbohydrate by anthrone method. Quantitative estimation of proteins by Lowry's method  
Determination of the acid value of a fat
3. Amylase production, H<sub>2</sub>S production, Urease production test, IMViC test
4. Effect of temperature and pH on growth of E. coli, Effect of carbon and nitrogen on microbial growth.
5. Demonstration of carbohydrate fermentation, indole production, catalase test, oxidase test.

# RKDF UNIVERSITY RANCHI

## B.Sc. Microbiology

### SEMESTER IV

Subject Code	Subject title	Credit
MJ06MIC	<b>Agriculture Microbiology</b>	3

#### **Unit 1: Waste management**

Solid waste management: Source and type of solid waste, method of solid waste disposal (composting and sanitary landfill), Liquid waste management: composition and strength of sewage (BOD & COD), primary, secondary, (oxidation pond, trickling filter, activated sludge process and septic tank) and tertiary sewage treatment.

#### **Unit 2: Microbial Bioremediation**

Principle and degradation of common pesticides, organic (hydrocarbon, oil spills) and inorganic matter, biosurfactants.

#### **Unit 3 : Water potability**

Treatment and safety of drinking water; Methods to detect potability of water sample: Standard qualitative procedure- MPN test/Presumptive test, confirmed and completed test for faecal-coliforms Membrane filter technique, Presence/Absence test fecal coliform.

#### **Unit 4: Biofertilizer**

Definition, Types- Bacterial, Fungal, Phosphate solubilizer, BGA & associative; Mode of application; Advantages and Disadvantages.

# RKDF UNIVERSITY RANCHI

## B.Sc. Microbiology

Introduction and definition; Types of biopesticides; Integrated pest management (IPM); Mode of action; Factor influencing; Applications, advantages & disadvantages.

# RKDF UNIVERSITY RANCHI

## B.Sc. Microbiology

Subject Code	Subject title	Credit
MJL06MIC	Agriculture Microbiology- Lab	1

- Specimen study of plant pathogens. Black rust of wheat, White rust of crucifer, Leaf curl of tomato Downy mildew, Red rot of sugarcane

Study of permanent slide and life materials

- *Cladosporium*
- *Helmithosporium*
- *Mucor*
- *Curvularia*
- *Alternaria*
- *Geotrichum*
- *Trichoderma*
- *Rhizopus*
- Isolation of *Rhizobium* sp. from leguminous root nodule.

# RKDF UNIVERSITY RANCHI

## B.Sc. Microbiology

Subject Code	Subject title	Credit
MJ07MIC	Environmental Microbiology	3

### Unit 1: Microorganisms and their habitats

Structure and function of ecosystem; Terrestrial environment: soil profile and soil microflora; Aquatic Environment: microflora of fresh water and marine habitats; Atmosphere: Aeromicroflora and dispersion of microbes; Animal Environment: Microbes in/on human body (microbiomes) & animal (Ruminants) body; Extreme habitats: Extremophiles: Microbes thriving at high & low temperature, pH. High hydrostatic & osmotic pressures, salinity and low nutrient level; Microbial succession in decomposition of plant organic matter

### Unit 2: Microbial Interactions

Microbe interactions: Mutualism, synergism, commensalism, competition, amensalism, parasitism, predation; Microbe-Plant interaction: positive-negative interaction; Microbe-Animal interaction: positive-negative interaction; Microorganism of rhizosphere, rhizoplane and phylloplane, mycorrhiza (types and its applications).

### Unit 3: Biogeochemical cycling

Carbon cycle: Microbial degradation of cellulose, hemicellulase, lignin and chitin; Nitrogen cycle: Nitrogen fixation, ammonification, nitrification, denitrification and nitrate reduction; Phosphorous cycle: Phosphate Immobilisation and solubilisation; Sulphur cycle: Microbes involved in sulphur cycle.

# RKDF UNIVERSITY RANCHI

## B.Sc. Microbiology

Subject Code	Subject title	Credit
MJL07MIC	Environmental Microbiology-Lab	1

### PRACTICALS:

To analyses soil- pH, moisture, water holding capacity.

Isolation of microorganisms (Bacteria & Fungi) from soil sample at different temperature (28o C & 45o C)

- Isolation of bacteria and fungi from rhizosphere and rhizoplane.
- Isolation of bacteria & fungi from air environment by exposure plate method.
- To determine BOD of waste water sample.\
- Bacteriological examinaiton of water by MPN test, presumptive coliform, confirmed coliform and completed coliform test.

# RKDF UNIVERSITY RANCHI

## B.Sc. Microbiology

Subject Code	Subject title	Credit
MJ08MIC	Virology	3

### **UNIT I.** Animal Viruses: Classification, Morphology and Chemistry of Viruses:

Virus evolution and classification, properties of viruses, virus structure. Techniques for visualisation and enumeration of viral particles, measuring biological activity of viruses, characterization of viral products expressed in infected cells, Diagnostic virology, Physical and chemical manipulation of viruses.

### **UNIT II.** Virus replication Strategies: Principal events involved in replication:

Adsorption, penetration, uncoating nucleic acid and protein synthesis, intracellular trafficking, assembly, maturation and release, viral-host interaction, Host response to viral infection. Replicative strategies employed by animal DNA viruses. Replicative strategies employed by animal RNA viruses. Identification of virus prototypes associated with different virus replication schemes; Details on important viruses namely Herpes virus, Poliovirus, Influenza virus, VSV, SV40 and Adeno Virus, Poxviruses, Hepatitis Viruses, coronaviruses, Retro viruses. Subviral pathogens: HDV, Prions, Viroids.

**UNIT III.** Pathogenesis of viral infection and control of viral diseases: Stages of infection, Patterns of some viral diseases- epidemiology, transmission, infection, symptoms, risk, transformation and oncogenesis, emerging viruses. Host specific and nonspecific defense mechanisms involved in resistance to and recovery from virus infections. Role of interferon in viral infections. Viral Chemotherapy: Nucleoside analogs, reverse transcriptase inhibitors, protease inhibitors, History of vaccines especially smallpox and polio. New methods: subunit vaccines, anti-idiotypic and DNA vaccines.

**UNIT IV.** Plant and microbial viruses: General methods of propagation of plant viruses; purification of plant viruses using centrifugation, chromatography and electrophoresis techniques, their assay and comparison of the sensitivity of assay methods; methods employed in identification of plant viruses and structural and functional genomics.

# RKDF UNIVERSITY RANCHI

## B.Sc. Microbiology

**UNIT V.** Symptoms of plant virus diseases, transmission of plant viruses, viral and viroid diseases and their control: General discussion on symptoms caused by viruses and viroids in diseased economically important trees and agricultural crops, and their control including development of virus disease resistant transgenics.

# RKDF UNIVERSITY RANCHI

## B.Sc. Microbiology

<b>Subject Code</b>	<b>Subject title</b>	<b>Credit</b>
MJL08MIC	<b>Virology-Lab</b>	1

1. Study of typical compound microscope
2. Micrometry measurement of a fungal spore
3. Determination of cell density by counting chamber
4. Isolation of bacteria from soil, air and water
5. Isolation of fungi from soil
6. Contact slide technique
7. Streak and Pour plate techniques
8. Simple staining of a bacterium
9. Negative staining of a bacterium
10. Gram staining — Positive and negative

# RKDF UNIVERSITY RANCHI

## B.Sc. Microbiology

### SEMESTER V

Subject Code	Subject title	Credit
MJ09MIC	<b>Molecular Biology and Microbial Genetics</b>	3

#### **Unit1: Overview of the genome organization –**

DNA/and RNA as genetic material, DNA double helix structure salient features, types of DNA. RNA Structure. Denaturation and renaturation, cot curves. DNA topology: linking number, topoisomerases. DNA organization in prokaryotes, viruses, eukaryotes

#### **Unit 2: DNA Replication in Prokaryotes and Eukaryotes**

Bidirectional and unidirectional replication, semi-conservative and semi discontinuous replication. Mechanism of DNA replication, Replication of chromosome ends.

#### **Unit 3: Transcription in Prokaryotes and Eukaryotes**

Concept of transcription unit. General transcription process in prokaryotes and eukaryotes; post-Transcriptional modification in eukaryotes, Alternative splicing mechanism, RNA interference

#### **Unit 4: Translation in prokaryotes and eukaryotes**

Ribosome structure, tRNA structure and processing, Mechanisms of translation in both prokaryotes and eukaryotes, Genetic code, Wobble hypothesis, Fidelity of translation

# RKDF UNIVERSITY RANCHI

## B.Sc. Microbiology

**Unit 5: Regulation of gene expression** in prokaryotes and eukaryotes  
Overview of regulation of gene expression, Regulation of gene expression by DNA methylation, histone acetylation and histone methylation mechanisms; Transcription control mechanisms, Inducible Operon System, Repressible Operon System, Translation control mechanisms.

**Unit 6: Regulation of gene expression** in prokaryotes and eukaryotes  
Overview of regulation of gene expression, Regulation of gene expression by DNA methylation, histone acetylation and histone methylation mechanisms; Transcription control mechanisms, Inducible Operon System, Repressible Operon System, Translation control mechanisms.

**Unit 7: Bacterial gene exchange processes**  
Mechanisms of Genetic Exchange, Horizontal gene transfer, Transformation; Conjugation; Transduction, Complementation.

**Unit 8: Mutations, mutagenesis and repair**  
Types of mutations, Physical and chemical mutagens. Loss and gain of function mutants. Reversion and suppression, Uses of mutations. Ames Test, DNA repair mechanism

# RKDF UNIVERSITY RANCHI

## B.Sc. Microbiology

Subject Code	Subject title	Credit
MJL09MIC	<b>Molecular Biology and Microbial Genetics-Lab</b>	1

### PRACTICALS:

1. Isolation of genomic DNA from *E. coli* and analysis by agarose gel electrophoresis.
2. Estimation of DNA using diphenylamine reagent.
3. Resolution of proteins by polyacrylamide gel electrophoresis (SDS-PAGE) and visualization using coomassie dye.
4. Replica plating method: Preparation of master and replica plates.  
Isolation of Histidine auxotrophs
5. Isolation of plasmid DNA from *E. coli*. Study the different conformations of plasmid DNA through agarose gel electrophoresis
6. Study of the effect of chemical (nitrous acid) and physical (UV) mutagens on bacterial cells
7. Demonstration of Ames test

# RKDF UNIVERSITY RANCHI

## B.Sc. Microbiology

Subject Code	Subject title	Credit
MJ10MIC	Medical Microbiology	3

### Unit 1: History of Medical Microbiology

Contribution of pioneers in the field of Medical Microbiology, Normal Microflora of human body: skin, mouth, alimentary canal and genitourinary tract

### Unit 2: Bacterial diseases

Diseases caused by certain bacterial pathogens *Staphylococcus aureus*, *Streptococcus pneumoniae*, *Mycobacterium tuberculosis*, *Salmonella typhi*, *Vibrio cholera*

### Unit 3: Viral diseases

Diseases caused by certain viruses Human Immunodeficiency Virus, Hepatitis Virus, Influenza virus, Herpes virus

### Unit 4: Parasitic diseases

Diseases caused by protozoa *Giardia* sp., *Plasmodium* sp., *Leshmania* sp., and *Entamoeba* sp.

### Unit 5: Pathogenic fungal disease I

Dermatophytes- *Trichophyton*, *Microsporum*  
Filamentous fungi causing subcutaneous infection by *Mucor*, *Rhizopus* and *Aspergillus*

# RKDF UNIVERSITY RANCHI

## B.Sc. Microbiology

### **Unit 6: Pathogenic fungal disease II**

Systemic mycoses caused by Blastomyces, Histoplasma and Yeast like fungi:  
*Candida* and *Cryptococci*

### **Unit 7: Antibiotics and Chemotherapeutics**

Historical development of chemotherapeutic and antibiotic substances, Major antimicrobial agents, Mode of action of chemotherapeutic and antibiotic substances.

### **Unit 8: Antibiotic resistance, Sample collection and processing**

Drug resistance, Mechanism of antibiotic resistance, Antibiotic susceptibility assay. Collection and transport of appropriate clinical sample specimen for clinical diagnostics

#### **Reference Books:**

## B.Sc. Microbiology

Subject Code	Subject title	Credit
MJL10MIC	Medical Microbiology-Lab	1

### PRACTICALS:

1. Antibiotic sensitivity assay
2. Slide based identification of the diseases caused by *Giardia* sp., *Plasmodium* sp., *Leshmania* sp., and *Entamoeba* sp.
3. Smear preparation and cellular study of skin, mouth

# RKDF UNIVERSITY RANCHI

## B.Sc. Microbiology

Subject Code	Subject title	Credit
MJ11MIC	Microbial Systematics	3

### Unit 1: Bacterial Systematics

1. Species concept in prokaryotes and eukaryotes
2. Speciation concept
3. 5-Kingdom classification system
4. 3-Domain classification system
5. Determinative Bacteriology (Phenetic Approach)
6. Systematic Bacteriology (Phylogenetic Approach)
7. Polyphasic Approach
8. Molecular clocks, phylogeny and molecular distances.

### Unit 2: Microbial Diversity

1. Facets of microbial diversity: morphological, structural, metabolic, ecological, behavioral and evolutionary
2. Factors affecting species divergence
3. Measurement of microbial diversity
4. Measures and indices of diversity; alpha, beta and gamma diversity

### Unit 3: Exploration of Un-culturable microbial diversity:

1. Concept of 'unculturable' bacterial diversity
2. Culture independent molecular methods for identifying unculturable bacteria (PCR, RFLP, ARDRA, DGGE, TGGE, RAPD, Microarray, FISH, RISA)

# RKDF UNIVERSITY RANCHI

## B.Sc. Microbiology

3. Strategies for exploring 'unculturable' bacteria
4. Metagenomic (methods and data analysis)

### **Unit 4: Evolution**

1. History and development of evolutionary theory (Lamarckism, Darwinism), Neo Darwinism: Spontaneous mutation controversy, evolution of rates of mutation, types of selection, levels of selection, group selection and selfish gene.
2. Socio-biology, kin selection, evolutionary stability of cooperation, sociality and multi-cellularity in microorganisms, Game theory. Co-evolutionary strategies, host parasite co-evolution
3. Molecular evolution: origin of life, the origin of new genes and proteins ageing, evolutionary trade-offs, r and k Selection.

## B.Sc. Microbiology

Subject Code	Subject title	Credit
MJL11MIC	Microbial Systematics-Lab	1

### PRACTICALS:

1. 16S rRNA gene sequence analysis of bacteria by BLAST analysis and drawing phylogenetic tree using software's
2. Slide based identification of various bacterial diseases.
3. Idea about PCR, FISH, Microarray techniques.

# RKDF UNIVERSITY RANCHI

## B.Sc. Microbiology

Subject Code	Subject title	Credit
B.Sc. Microbiology	Internship / Project work	SIP

Overall Internship/ Apprenticeship/ Project may be evaluated under the following heads:

- Motivation for the choice of topic
- Project dissertation design
- Methodology and Content depth
- Results and Discussion
- Future Scope &References
- Presentation style
- Viva-voce

### **Internship/ Apprenticeship/ Project**

Each student has to submit two copies of the Internship/ Apprenticeship/ Project work duly forwarded by the HOD of Department concerned. The forwarded copies will be submitted in the Department of Microbiology, RKDF University, for evaluation (Seven days before the seminar).

The paper will consist of

- (a) Field work/Lab work related to the project.
  - (b) Preparation of dissertation based on the work undertaken.
  - (c) Presentation of project work in the seminar on the assigned topic in the U.G. Department of Microbiology, RKDF University, Ranchi & open viva thereon.
- 
- Student alone or in a group of not more than five, shall undertake one Project approved by the Subject Teacher/H.O.D. of the Department/College concerned. The progress of the Project shall be monitored by the faculty members at regular Intervals.

**OR**

- Paper presentation on 'Topic Provided' and group discussion

# RKDF UNIVERSITY RANCHI

## B.Sc. Microbiology

### SEMESTER VI

Subject Code	Subject title	Credit
MJ12MIC	Quantitative Biology	3

#### Unit 1: Descriptive Statistics

1. Basic concept in statistics: Sample Statistics, Population parameter, variables, Sampling methods, Types of data (qualitative and quantitative data, discrete and continuous series data), Sources of data, measurement scales (nominal, ordinal, interval and ratio), variability and uncertainty in measurements
2. Measures of central tendency : Mean, Mode and median
3. Measures of dispersion : Mean deviation, Standard deviation and Variance
4. Data presentation : Tables and Graphs (Histogram, bar, pie and line)
5. Simple linear Regression and correlation

#### Unit 2. Inferential Statistics-I

1. Uncertainty: Variation, Probability and inference
2. Central Limit Theorem, Standard deviation of the means standard error and confidence interval
3. Basic concepts: Null hypothesis, P-value significance level, Test statistics, type I and type II errors, one tailed and two tailed tests, degrees of freedom.
4. Importance of Parametric and nonparametric tests
5. Parametric statistical test: Z-test, t-test and F-test

# RKDF UNIVERSITY RANCHI

## B.Sc. Microbiology

### Unit 3: Inferential Statistics-II

1. Test of Significance: Chi square test (Goodness of fit and Independence)
2. ANOVA : One way and two- way, Post Hoc test(Tukey's)
3. Non-parametric Tests: Sign test, Wilcoxon's signed rank test and Mann-Whitney U test.

### Unit 4: Probability and Probability Distribution

1. Concept of experiment, event (mutually exclusive & non exclusive events, dependent & independent events).
2. Laws of probability (addition and multiplication);
3. Probability distribution – Normal (x-scale and z-scale), Binomial and Poisson distributions.

## B.Sc. Microbiology

Subject Code	Subject title	Credit
MJ13MIC	Immunology	3

### Overview of Immunology

History of immunology, Physical and physiological barriers, Innate and Acquired immunity, Organs and Cells of Immune system

### Complement System

Complement System Proteins, Complement System Activation by Classical, Alternate and Lectin Pathway

### Immunity

Humoral and Cell Mediated Immunity, Active and Passive Immunity

### Antigen & Immunogens

Antigen Characteristics, Types of Antigens, Adjuvants, Immunogenicity and Antigenicity, Cytokines,

### Immunoglobulins and MHC and their role

Classes of immunoglobulin, structure and function, Major Histocompatibility Complex: Types, Antigen Presentation through MHC class I and class II molecules

### Hypersensitivity

Types of Hypersensitivity, Mechanism of hypersensitivities with examples

# RKDF UNIVERSITY RANCHI

## B.Sc. Microbiology

### **Immune Response**

Antibody dependent Cell mediated Cytotoxicity, Phagocytosis, Inflammation and Inflammatory response mechanism.

### **Applications of Immunoglobulins**

Applications of antibody in diagnosis and therapy; *In vitro* serological test methods: Antigen-Antibody Reactions: Agglutination and immunodiffusion; ELISA and RIA.

## B.Sc. Microbiology

Subject Code	Subject title	Credit
MJ14MIC	Cell Biology and Analytical Techniques	3

**UNIT I.** Signal transduction in eukaryotes: Protein kinases, phosphorylation cascades, Ras pathway, MAP kinase pathway, cyclic nucleotides, G proteins.

**UNIT II.** Microscopy- Basic principles and application of light, phase contrast microscopy, fluorescent and electron microscope- scanning and transmission. Microtome and sample preparations- fixing of specimens, preparation of block, staining of biological samples. Principles of cytometry and flow cytometry.

**UNIT III.** Analytical Techniques: Principles of centrifugation, techniques, preparative and analytical methods, density gradient centrifugation. General principle and application of chromatography-paper, column, thin layer, Gas, Ion Exchange, affinity chromatography, HPLC and Gel filtration. Electrophoresis-moving boundary, zone electrophoresis, immune electrophoresis, immunoblotting, isoelectric focussing, 2-D electrophoresis.

**UNIT IV.** Principles, laws of absorption and radiation. Visible, ultraviolet, infrared and mass spectrophotometry. Absorption spectra, flame photometry, NMR, ESR, principles of colorimetry, turbidometry, viscometry. Determination of size, shape and molecular weight of macromolecule- light scattering, diffusion, sedimentation, optical rotatory dispersion and X ray diffraction.

**UNIT V.** Radio isotopic tracers- methodology, radiometric analysis, stable and radioactive isotopes, preparation, labelling, detection and measurement of isotopes. RIA, Kinetics of radioactive disintegration, manometric techniques, freeze drying and its application in biological systems

# RKDF UNIVERSITY RANCHI

## B.Sc. Microbiology

## B.Sc. Microbiology

<b>Subject Code</b>	<b>Subject title</b>	<b>Credit</b>
MJL14MIC	Cell Biology and Analytical Techniques-Lab	1

1. Characterization of DNA by Spectrophotometric Assay and Melting Temperature ( $T_m$ )
2. Agarose Gel Electrophoresis
3. Polymerase Chain Reaction (PCR)
4. Optimization of Annealing Temperature

# RKDF UNIVERSITY RANCHI

## B.Sc. Microbiology

Subject Code	Subject title	Credit
MJ15MIC	Bio-Molecules and Enzymes	3

**UNIT I.** Major Biomolecules: Carbohydrates – Classification, chemistry, properties, and function –. Conjugated polysaccharides– lycoproteins, muriens and lipopolysaccharides.

**UNIT II.** Lipids – classification, chemistry, properties and function –Conjugated lipids – lipoproteins. Major steroids of biological importance – prostaglandins.

**UNIT III.** Amino acids and proteins: classification, structure and function. Peptide structure. Ramachandran's plot.. Structural levels of proteins – primary, secondary, tertiary and quaternary, denaturation of proteins. Hydrolysis of proteins, Protein sequencing using various methods.

**UNIT IV.** Nucleic acids – Structure, function and their properties. Structural polymorphism of DNA, RNA. Structural characteristics of RNA. Sources,

**UNIT V.** Enzymology- Introduction, General characteristics of enzymes, Activation energy, coupled reactions, active site and its importance, Factors influencing catalytic efficiency. Enzyme kinetics, Rapid Equilibrium, Henry-Nucgaekkus-Menten's equations, Steady State approach, significance of Km, Haldane equation, Velocity vital Substrate concentration curves. Methods of plotting enzyme kinetics data-Lineweaver-Burk. Equilibrium dialysis, Effect of pH and temperature on enzyme stability and activity, Arrhenius equation

**UNIT VI.** Regulation of enzyme activity: Feedback inhibition, reversible covalent modification, irreversible covalent modification, allosteric concept, Aspartate transcarbamylase, ligand-protein interaction, scatchard plot, Hill plot, cooperativity index, Models for allostery (MWC, KNF), Half site reactivity. Enzyme Inhibition, Models and types of inhibition.

# RKDF UNIVERSITY RANCHI

## B.Sc. Microbiology

**UNIT VII.** Applied enzymology: Application of enzymes in analytical labs. (clinical and industrial), enzymes as industrial catalysts, Immobilized enzymes, enzyme electrodes, assay of enzyme activities for diagnostic purposes, abymes, recent developments

# RKDF UNIVERSITY RANCHI

## B.Sc. Microbiology

Subject Code	Subject title	Credit
MJL15MIC	Bio-Molecules and Enzymes -Lab	1

1. Estimation of proteins by Biuret method and FolinCiocalteau method.
2. Production of citric acid by *A.niger*. Recovery & Fermentation.
3. Estimation of Ethanol by dichromate method.
4. Production of Ethanol by fermentation and recovery.
5. Preparation of Wine from grapes by fermentation.
6. Production of glutamic acid by fermentation.

# RKDF UNIVERSITY RANCHI

## B.Sc. Microbiology

### SEMESTER VI

Subject Code	Subject title	Credit
MJ16MIC	Bio Informatics	3

**UNIT I.** Introduction to computers and bioinformatics - Types of operating systems, concepts of networking and remote login, basic fundamentals of working with unix.

**UNIT II.** Biological databases- Overview, modes of database search, mode of data storage (Flat file format, db-tables), flat file formats of Gene Bank, EMBL, DDBJ, PDB.

**UNIT III.** Sequence alignment —Concept of local and global sequence alignment, pairwise sequence alignment, scoring an alignment, substitution matrices, multiple sequence alignment.

**UNIT IV.** Phylogenetic analysis- Basic concepts of phylogenetic analysis, rooted/uprooted trees, approaches for phylogenetic tree construction (UPGMA, Neighbor joining, Maximum parsimony, Maximum likelihood).

**UNIT V.** Generation and analysis of high throughput sequence data – Assembly pipeline for clustering of HTGS data, format of “. ace” file, quality assessment of genomic assemblies, international norms for sequence data quality, Clustering of EST sequences, concept of Unigene. Annotation procedures for high through-put sequence data- Identification of various genomic elements (protein coding genes, repeat elements, strategies for annotation of whole genome, functional annotation of EST clusters, gene ontology (GO) consortium.

**UNIT VI.** Structure predictions for nucleic acids and proteins - Approaches for the prediction of RNA secondary and tertiary predictions, energy minimization and base covariance models, Basic approaches for protein structure predictions, comparative modeling, fold recognition/“threading” and ab-oi/io prediction

MJL16MIC	Bio Informatics- <b>Lab</b>	1

1. Computer operations-getting acquainted with different parts of Computers. [DOS] and basics of operating a computer.
2. Creating files, folders and directories.
3. Applications of computers in biology using MS-Office.
4. A] MS-Word B] Excel C] Power Point
5. Creating an e-mail account, sending and receiving mails.
6. An introduction to INTERNET, search engines, websites, browsing and Downloading

# RKDF UNIVERSITY RANCHI

## B.Sc. Microbiology

Subject Code	Subject title	Credit
MJ17MIC	Microbial Genetics	3

**UNIT I.** Genetic analysis of bacteria: Importance and uses of mutation analysis. Inheritance in bacteria, types of mutations, spontaneous and induced mutagenesis, isolating mutants, selecting mutants, mutant enrichment. Reversions versus suppression. Complementation tests, recombination tests and gene replacements. Cloning genes By complementation. Cloning genes by marker rescue.

**UNIT II.** Gene transfer and mapping by conjugation: Basis of fertility in bacteria. Self-transmissible and mobilizable plasmids. Molecular mechanism of gene transfer by conjugation – genes and proteins involved. Regulation of gene transfer by conjugation. Hfr strains. Mapping bacterial genomes using Hfr strains. Chromosomal DNA transfer by plasmids – by integrated plasmids, by chromosome mobilization and by creation of prime factors. Ti plasmid transfer system and its application in creating transgenics.

**UNIT III.** Lytic bacteriophages: Lytic development cycle using phages T4 and T7 as models. Regulation of expression of genes in phage T4 – transcriptional activators, antitermination, a new sigma factor and replication-coupled transcription. Regulation of gene expression in phage T7 – a phage-encoded RNA polymerase. Replication of T4 versus T7 phages – recent advances. Replication and packaging of filamentous phages M13 and f1 – recent advances. Genetic analysis of phages – complementation and recombination tests with phages.

**UNIT IV.** Lysogenic phages: Lambda phage – gene and promoter organization. Lambda lytic Cycle – regulation of gene expression – very early, early and late genes. Establishment and maintenance of lysogeny. Regulation of gene expression in lysogenic phase - role of cI, Cii and cIII proteins. Lambda immunity region and immunity to super infection. Events leading to induction – role of cI and cro repressors in regulating the events. Other lysogenic phages – P2 and P4.

# RKDF UNIVERSITY RANCHI

## B.Sc. Microbiology

**UNIT V.** Gene transfer by transformation and transduction: Natural transformation and competence. Molecular basis of natural transformation – DNA uptake competence systems in gram positive and gram-negative bacteria. Artificially induced competence. Generalized versus specialized transduction - T4 and lambda phage. Mapping bacterial genes by transduction.

**UNIT VI.** Transposons: Discovery of transposition. Classes of bacterial transposons. Regulation of transposition activity. Effects of transposition in bacteria. Genetic requirements for transposition. Molecular mechanisms of transposition – genetic evidence supporting the mechanisms. Conjugative transposons. Transposon mutagenesis. Cloning out genes by transposon mutagenesis.

**UNIT VII.** Gene regulation: Control of gene expression. Positive gene regulation, negative gene regulation and attenuation, using the lac, gal, trp,

AMJ02MIC	Microbial Biotechnology	3

1. Fermentative production of industrial alcohol, uses, raw materials, microorganisms, inoculums preparation, preparation of wort, fermentation and recovery. Fermentative production of beer – Medium components, malt, malt adjuncts, hops, water. Preparation of wort, mashing, wort boiling, microorganism, inoculum preparation, fermentation, cold storage maturation, carbonation, packing and preservation. Principles of wine making – Fruit selection, picking, crushing, sulphite addition, processing, fermentation, aging and bottling.

2. Fermentative production of citric acid, uses, microorganism, inoculum preparation, medium preparation, fermentation, recovery and mechanism of citric acid production. Fermentative production of vitamin B12 – Uses, structure of vit-B12, microorganisms, inoculums preparation, medium preparation, fermentation and recovery. Fermentative production of glutamic acid – Uses, microorganism, inoculum preparation, production medium, fermentation and downstream processing

3. Antibiotics – Commercial production of benzyl penicillin, uses, microorganism, inoculums preparation, production medium, fermentation, recovery and semi synthetic penicillins. Fermentative production of tetracyclines-uses, chlortetracycline, oxy-tetracycline, tetracycline and semisynthetic tetracyclines, structures, microorganisms, inoculum preparation, production medium, fermentation and recovery methods.

4. Production and application of microbial enzymes. – Amylases and proteases, uses, microorganisms, inoculum preparation, production medium, fermentation and recovery, steroid transformations-substrates, typical structures, microorganisms, inoculum preparation, 11-hydroxylation, process and recovery. Principles of vaccine

## B.Sc. Microbiology

Subject Code	Subject title	Credit
AMJ03MIC	<b>Fermentation and Bioprocess Technology</b>	3

**Unit 1:** Concept of Fermentation, Different types of fermentations-Batch, Fed-batch and continuous fermentation, An overview of submerged and solid state fermentations. Factors affecting fermentation; Bioreactor- structure and applications of a laboratory bioreactor; Different types of bioreactors like - Stirred tank reactor, air-lift, packed bed, fluidized and bubble column- their structure and applications; Multiphase bioreactor system.

**Unit 2:** Sterilization (medium and air)-thermal death kinetics of microorganisms; aeration, agitation and heat transfer in bioprocess. Microbial substrates, Media formulation and optimization; Microbial growth and kinetics. Monitoring of Bioprocesses: On line data analysis for measurement and control of important physicochemical and biochemical parameters, Computer based data acquisition, Techno-economic feasibility of bioprocess.

**Unit 3:** Isolation and characterization of industrially important Microorganisms; Generation of mutant strains for fermentation. Different approaches for strain improvement for fermentation. Concept of primary and secondary metabolites, Yield coefficient and efficiency. An overview of important products like antibiotic, biofuel, enzymes, An overview of recombinant proteins.

**Unit 4:** Biological mixture-composition and separation of different components of biological mixture-filtration, centrifugation, sedimentation, flocculation; Cell disruption; separation of soluble products: liquid-liquid extraction, precipitation, chromatographic techniques, reverse osmosis, ultra and micro filtration; Purification of wild and recombinant proteins, Product polishing-drying; crystallization; storage and packaging. Recent advances and applications in the field.

RC01	RESEARCH METHODOLOGY	4

**1. Foundations of Research:** Meaning, Objectives, Motivation, Utility. Concept of theory, empiricism, deductive and inductive theory. Characteristics of scientific method - Understanding the language of Research - Concept, Construct, Definition, Variable. Research Process.

**2. Problem Identification & Formulation** - Research Question - Investigation Question - Measurement Issues - Hypothesis - Qualities of a good Hypothesis. Null Hypothesis & Alternative Hypothesis. Hypothesis Testing - Logic & Importance.

**3. Research Design:** Concept and Importance in Research - Features of a good research design - Exploratory Research Design - concept, types and uses, Descriptive Research Designs - concept, types and uses. Experimental Design: Concept of Independent & Dependent variables.

**4. Qualitative and Quantitative Research: Qualitative research** - Quantitative research - Concept of measurement, causality, generalization, replication. Merging the two approaches.

**5. Measurement: Concept of measurement-** what is measured? Problems in measurement in research- Validity and Reliability. Levels of measurement Nominal, Ordinal, Interval, Ratio.

**6. Sampling:** Concepts of Statistical Population, Sample, Sampling Frame, Sampling Error, Sample Size, Non Response. Characteristics of a good sample. Probability Sample- Simple Random Sample, Systematic Sample, Stratified Random Sample & Multi-stage sampling. Determining size of the sample Practical considerations in sampling and sample size.

# RKDF UNIVERSITY RANCHI

## B.Sc. Microbiology

**7. Data Analysis:** Data Preparation - Univariate analysis (frequency tables, bar charts, pie charts, percentages), Bivariate analysis- Cross tabulations and Chisquare test including testing hypothesis of association.

**8. Interpretation of Data and Paper Writing-** Layout of a Research Paper, Journals in Computer Science, Impact factor of Journals, When and where to publish ? Ethical issues related to publishing, Plagiarism and Self-Plagiarism.

**9. Use of Encyclopedias, Research Guides, Handbook etc., Academic Databases for Computer Science Discipline.**

**10. Use of tools I techniques for Research:** methods to search required information effectively, Reference Management Software like Zotero/ Mendeley, Software for paper formatting like LaTeX/ MS Office, Software for detection of Plagiarism

RC03	Research Report	4

A research report is a reliable source to recount details about conducted research. It is most often considered to be a true testimony of all the work done to garner specificities of research. Research reports present the results of formal investigations into the properties, behavior, structures, and principles of material and conceptual entities. Almost any physical phenomenon or concept may be investigated in a research framework. The following are some key differences between formal research, and other less structured kinds of inquiry.

1. *Problem definition*: the rigorous reduction of the inquiry to a narrow question with a quantifiable answer. The most significant preliminary phase of research writing is that of effective problem definition. This process is one of identifying an interesting question and narrowing the research inquiry to a manageable size.
2. *Research approach*: the structuring of the research according to a methodology associated with a specialized field of inquiry. Specialized fields have research methodologies that are followed in investigating problems. These range from general methods of interviewing and literature researching to highly specialized procedures for using materials and mechanical devices to establish appropriate conditions for generating data. Adapting a sound research methodology to the investigation of your problem is a major milestone in the conduct of your inquiry.
3. *Research report*: the presentation of the research and its results in a rigorously formatted document that follows a conventional structure. In presenting your research, you pull all its elements together into a focused, coherent document. Research reports contain a standard set of elements that include.

## B.Sc. Microbiology

### MINOR (I/ III/ V/ VII)

#### SEMESTER I

Subject Code	Subject title	Credit
MN01CHE	Microbiology I	4

**Introductory Microbiology:** - History of microbiology; Development of pure culture methods; Enrichment culture methods; Development of microbiology in the twentieth century. Methods of Microbiology: Isolation, pure culture techniques, staining of bacterial cells and its organelles, methods of sterilization-physical and chemical, selection and construction of culture media, enrichment culture technique, assay of amino acids and antibiotics. Microbial evolution, Systematics and Taxonomy: Evolution of earliest life forms, bacterial identification, nomenclature and classification

**Microbial Diversity:** - Prokaryotic cells: structure function: General structure and feature; cell wall of eubacteria, flagella, cell inclusions-endospore and gas vesicles. 2. Prokaryotic diversity: Bacteria; Brief account of all groups of bacteria and cyanobacteria, Rickettsias, Ohlamydias, and mycoplasma. 3. Archae: Archaeobacteriaextremophilic microbes - their biotechnological potentials. 4. Viruses: Classification, morphology and composition of virus in general. 5. Bacteriophage: phi X174 cyanophage and retroviruses, viroids and prions.

**Microbial growth and Physiology:** The definition of the growth, growth curve, measurement of growth and growth yields, synchronous and continuous growth. Culture collection and maintenance of culture. Life style of Prokaryotes, Unicellular Eukaryotes 2. Overview of microbial nutrition: Types and mode of nutrition in bacteria. 3. Metabolic diversity among microorganisms: Photosynthesis in microorganisms, chemolithotrophy, sulphate reduction.

#### Practicals

1. Good laboratory practice in Microbiology and safety measures. Cleaning and sterilization of glassware and equipment's. Study of aseptic technique- preparation of cotton plug, wrapping of glassware, transfer of media and Inoculum.
2. Study of instruments- Microscope, autoclave, hot air oven, laminar airflow, inoculation loop and needle, incubator, B.O.D incubator, centrifuge machine, pH meter, colony counter, seitz filter, membrane, filter, colourimeter, spectro photometer.

# RKDF UNIVERSITY RANCHI

## B.Sc. Microbiology

3. Preparation of different culture media- nutrient agar/nutrient broth for bacterial culture, PDA for fungal culture. Enumeration of bacteria using spread plate and pour plate techniques. Isolation of bacteria by pour plate, spread plate and streak plate method.
4. Staining of bacteria
  - a. Simple staining- methylene blue
  - b. Gram's staining
  - c. Acid fast staining
  - d. Ziehl Neelsen staining
  - e. Giemsa staining

# RKDF UNIVERSITY RANCHI

## B.Sc. Microbiology

### SEMESTER III

Subject Code	Subject title	Credit
MN03CHE	Microbiology II	3

**Environmental Microbiology:** -Microorganisms and their habitats Structure and function of ecosystem; Terrestrial environment: soil profile and soil micro flora; Aquatic Environment: micro flora of fresh water and marine habitats; Atmosphere: Aero micro flora and dispersion of microbes; Animal Environment: Microbes in/on human body (micro biomes) & animal (Ruminants) body; Extreme habitats: Extremophiles: Microbes thriving at high & low temperature, pH. High hydrostatic & osmotic pressures, salinity and low nutrient level; Microbial succession in decomposition of plant organic matter.

Microbe interactions: Mutualism, synergism, commensalism, competition, amensalism, parasitism, predation; Microbe-Plant interaction: positive-negative interaction; Microbe-Animal interaction: positive-negative interaction.

**Systematic Microbiology:** Diseases caused by Gram positive cocci-sore throat, pneumonia etc., Diseases caused by Gram negative cocci- meningitis, gonorrhoea etc. Diseases caused by Gram positive bacilli- Tuberculosis, Diphtheria, Tetanus, Gas gangrene etc, Diseases caused by Gram negative bacilli of Entrobacteriaceae- Enteric fever, Bacillary dysentery,UTI Diseases caused by Gram negative bacilli- Cholera, plague, Whooping cough, Wound infection, Septicaemia. Sexually transmitted diseases. Disease caused by mycoplasma, Chlamydia, Rickettsia.

**Overview of medical Mycology virology:** Important fungal diseases- Superficial, Subcutaneous, Systemic and opportunistic Mycosis. Overview of Medical Parasitology, Important Protozoan Diseases-Ascaris,Ankylostomiasis,Falariasis,Taeniasis, Echinococcosis etc. Important Viral DiseasesHerpesvirus,Po1iovirus,Rabies virus,Arboviruses,Hepatitis

**Haematology:**BasicHaematological Disorders- Classifiacation of Anemia,Iron Deficiency anemia,Mega1ob1asticAnemia, Haemolytic Anemia, Basic Haematological Techniques- Collection of Blood Specimens, Haemolysis of Blood, Separation of Serum and Plasma, Maintenance and Transport of Specimen, Coagulation and Bleeding Disorders in brief.

# RKDF UNIVERSITY RANCHI

## B.Sc. Microbiology

### Practicals

1. Estimation of bacteria, actinomyceles and fungi in soil by dilution — Plating method.
2. Isolation and enumeration of major groups of microorganisms from rhizosphere and non-rhizosphere.
3. Study of root nodules and isolation of Rhizobium from legume root nodules.
4. Isolation of Azospirillum / Azotobacter.
5. Isolation of microorganisms of air by Petri plate exposure method.
6. BacterialConjunction
7. To perform test for antibiotics sensitivity by disc method. To determine the minimum inhibitory concentration of given antibiotics.
8. Preparation of blood smear.
9. To isolate serum from blood plasma.
10. To perform agglutination reaction to identification of blood group.

## B.Sc. Microbiology

### SEMESTER V

Subject Code	Subject title	Credit
MN05MIC	<b>Diversity of Plants, And Environmental Science</b>	3

### DIVERSITY OF PLANTS

**Unit 1:** Microbes Viruses – Discovery, general structure, replication (general account), DNA virus (T-phage); Lytic and lysogenic cycle, RNA virus (TMV); Economic importance; Bacteria – Discovery, General characteristics and cell structure; Reproduction – vegetative, asexual and recombination (conjugation, transformation and transduction); Economic importance.

**Unit 2:** Algae General characteristics; Ecology and distribution; Range of thallus organization and reproduction; Classification of algae; Morphology and life-cycles of the following: Nostoc, Oedogonium, Vaucheria, Ectocarpus, Polysiphonia. Economic importance of algae

**Unit 3:** Fungi Introduction- General characteristics, ecology and significance, range of thallus organization, cell wall composition, nutrition, reproduction and classification; True Fungi- General characteristics, ecology and significance, life cycle of Penicillium, Puccinia, Ustilago, Alternaria; Symbiotic Associations Lichens: General account of Mycorrhiza: ectomycorrhiza and endomycorrhiza and their significance.

**Unit 4:** Introduction to Archegoniate Identifying features of archegoniate, Transition to land habit, Alternation of generations.

**Unit 5:** Bryophytes General characteristics, adaptations to land habit, Classification, Range of thallus organization. Classification (up to family), morphology, anatomy and reproduction of Marchantia and Funaria. (Developmental details not to be included). Ecology and economic importance of bryophytes with special reference to Sphagnum.

**Unit 6:** Pteridophytes General characteristics, classification, Early land plants Fossil and Fossilization process (Rhynia). Classification (up to family), morphology, anatomy and reproduction of Lycopodium, Equisetum and Pteris. Heterospory and seed habit, stelar evolution.

# RKDF UNIVERSITY RANCHI

## B.Sc. Microbiology

**Unit 7:** Gymnosperms General characteristics, classification (up to family), morphology, anatomy and reproduction of Cycas and Pinus. Ecological and economical importance.

### ENVIRONMENTAL SCIENCE

**Unit 1:** Introduction to environmental studies Multidisciplinary nature of environmental studies; Scope and importance; Concept of sustainability and sustainable development.

**Unit 2:** Ecosystems Structure and function of ecosystem; Energy flow in an ecosystem: food chains, food webs and ecological succession. Case studies of the following ecosystems: Forest ecosystem Grassland ecosystem Desert ecosystem Aquatic ecosystems (ponds, streams, lakes, rivers, oceans, estuaries)

**Unit 3:** Natural Resources: Renewable and Non--renewable Resources Land resources and land use change; Land degradation, soil erosion and desertification. Deforestation: Causes and impacts due to mining, dam building on environment, forests, biodiversity and tribal populations. Water: Use and over--exploitation of surface and ground water, floods, droughts, conflicts over water (international & inter--state). Energy resources: Renewable and non-renewable energy sources, use of alternate energy sources, growing energy needs, case studies.

**Unit 4:** Biodiversity and Conservation Levels of biological diversity: genetic, species and ecosystem diversity; Biogeographic zones of India; Biodiversity patterns and global biodiversity hot spots. India as a mega--biodiversity nation; Endangered and endemic species of India. Threats to biodiversity: Habitat loss, poaching of wildlife, man--wildlife conflicts, biological invasions; Conservation of biodiversity: In--situ and Ex--situ conservation of biodiversity. Ecosystem and biodiversity services: Ecological, economic, social, ethical, aesthetic and Informational value.

**Unit 5:** Environmental Pollution Environmental pollution: types, causes, effects and controls; Air, water, soil and noise pollution Nuclear hazards and human health risks. Solid waste management: Control measures of urban and industrial waste. Pollution case studies.

**Unit 6:** Environmental Policies & Practices Climate change, global warming, ozone layer depletion, acid rain and impacts on human communities and agriculture. Environment Laws: Environment Protection Act; Air (Prevention & Control of Pollution) Act; Water (Prevention and control of Pollution) Act; Wildlife Protection Act; Forest Conservation Act. International

## B.Sc. Microbiology

Subject Code	Subject title	Credit
MNL05MIC	Diversity of Plants and Environmental Science-Lab	1

### PRACTICALS:

1. EMs/Models of viruses – T-Phage and TMV, Line drawing/Photograph of Lytic and Lysogenic Cycle. 2. Types of Bacteria from temporary/permanent slides/photographs; EM bacterium; Binary Fission; Conjugation; Structure of root nodule.
2. Gram staining.
3. Morphology and structural details of forms belonging to Algae, Fungi, Bryophytes, Pteridophytes and Gymnosperm prescribed in the syllabus and their temporary/permanent stained microscopic slide preparation and studies.
4. Comments upon the spots
5. Viva-voce
6. Field study report
7. Class records, Herbarium, Charts, Model etc. 9. Study of instruments used to measure microclimatic variables: Soil thermometer, maximum and minimum thermometer, anemometer, hygrometer, rain gauge and lux meter.

# RKDF UNIVERSITY RANCHI

## B.Sc. Microbiology

Subject Code	Subject title	Credit
MN07MIC	Food Microbiology	3

### Unit 1: Introduction to food & nutrition.

History, Development and Scope of food microbiology; Concept of food and nutrients; Physiochemical properties of food; Importance and types of microorganisms in food (bacteria, mold and yeast); Food as a substrate for microorganism- Intrinsic and extrinsic factors that affect growth and survival of microbes in food, natural flora and source of contamination of foods in general.

### Unit 2: Microbial spoilage of various foods

Principal; Spoilage of vegetables, fruits, meats, eggs, milk and butter, bread, canned foods.

### Unit 3 : Microbial examination of food

DMC, viable count, examination of faecal Streptococci. Food quality monitoring, Biosensors and Immunoassays.

### Unit 4: Food Preservation

Basic Principles, Methods (heating, freezing, dehydration, chemical preservatives, radiation). Modern technologies in food preservation, Packaging material.

**Unit 5: Fermented foods:**  
Fermented dairy products (cheese, butter, yoghurt), Kefir; Other Fermented

# RKDF UNIVERSITY RANCHI

## B.Sc. Microbiology

foods- Soya sauce, Saurkraut, Dosa, Tempeh; Probiotics: health benefits, types of microorganisms used, probiotic foods available in market.

### **Unit 6 : Microorganisms and milk**

Physical and chemical properties of milk; Milk as a substrate for microorganisms; Microbiological analysis of milk – Rapid Platform test, standard plate count, MBRTtest, alkaline phosphatase enzyme test, DMC; Method of preservation of milk and milk product, pasteurization sterilization and dehydration.

### **Unit 7 : Food sanitization and control**

HACCP, Indices of food sanitary quality and sanitisers; Microbiological quality standard of food

### **Reference Books:**

## B.Sc. Microbiology

Branch	Subject title	Subject Code
MNL07MIC	Food Microbiology-Lab	1

### PRACTICALS:

- **Microbial Ecology:** Food safety depends on understanding what conditions encourage microbial growth and what inhibits it.
- **Pathogens – Gram-negative:** The FDA/USDA are hustling to better understand Shiga-toxin producing *E. coli* (STEC) and Salmonella.
- **Pathogens – Gram-positive:** *Listeria monocytogenes* has plagued many food manufacturers. We focus on ecology and control.
- **Spoilage:** Yeast and mold are major culprits in food spoilage. Learn how to detect and identify them in food processing facilities.
- **Current Food Safety Issues:** Get the latest on the worst outbreaks to hit the news and consumers' GI tracts.
- **Testing:** A good test done wrong can be more dangerous than no testing at all. Know the uses and abuses of microbial testing.
- **Predictive Models and Quantitative Risk Assessment:** Tools of quantification are continually expanding in power and applicability.

\*\*\*\*\*
